Schedule 6 Planning scheme policies

SC6.1 Planning scheme policy index

The table below lists all the planning scheme policies applicable to the Planning Scheme area.

Table SC 6.1.1 Planning scheme policy index

Policy number	Planning scheme policy title
SC6.2	Environmental features planning scheme policy
SC6.3	Heritage planning scheme policy
SC6.4	Landscaping planning scheme policy
SC6.5	Natural hazards planning scheme policy
SC6.6	Third party advice or comment planning scheme policy
SC6.7	Growth management planning scheme policy
SC6.8	Whitsunday Regional Council development manual planning scheme policy

SC6.1.1 Scope of the Planning Scheme Policies

The table below lists the scope of all the planning scheme policies, providing an indication as to when Council may request an applicant to provide further information in the form of a planning scheme policy.

Table SC 6.1.1.1: Scope of the Planning Scheme Policies

Planning Scheme Policy/Report	Scope
Environmental features planning scheme policy	
Acid sulfate soils assessment report	Applications triggering assessment against the Acid sulfate soils overlay code.
Acid sulfate soils management plan	Applications triggering assessment against the Acid sulfate soils overlay code and found to be disturbing acid sulfate soils within the acid sulfate soils assessment report.
Ecological assessment report	Applications triggering assessment against the: <ul style="list-style-type: none"> a) Environmental significance overlay code; or b) Waterway and wetland overlay code.
Vegetation management plan	Applications triggering assessment against the: <ul style="list-style-type: none"> a) Construction management code; or b) Waterway and wetlands overlay code.
Heritage planning scheme policy	
Heritage impact assessment report	Applications triggering assessment against the Heritage overlay code.
Heritage management plan	Applications triggering assessment against the Heritage overlay code.
Archaeological management plan	Applications triggering assessment against the Heritage overlay code.
Landscaping planning scheme policy	
Landscaping plan	Applications triggering assessment against the Landscaping code.
Landscaped separation buffer	Applications triggering assessment against the:

	<ul style="list-style-type: none"> a) Landscaping code; or b) Reconfiguring a lot code; or c) Agricultural land overlay code.
Planting species list	All development is to have regard for the Planting species list.
Natural hazard planning scheme policy	
Bushfire hazard assessment report	Applications triggering assessment against the Bushfire hazard overlay code.
Bushfire hazard management plan	Applications triggering assessment against the Bushfire hazard overlay code.
Coastal hazard assessment report	Applications triggering assessment against the Coastal environment overlay code.
Flood hazard assessment report	Applications triggering assessment against the Flood hazard overlay code
Landslide hazard (geotechnical) assessment report	Application triggering assessment against the Landslide hazard overlay code.
Growth management planning scheme policy	
Development needs assessment report	At Council discretion. Applications proposing the development of five (5) or more lots (including those lots created under a community title scheme), outside of the existing urban footprint may be required to undertake this report.
Economic impact assessment report	At Councils discretion. Applications proposing the development of Business or Entertainment Activities may be required to undertake this report where the development is: <ul style="list-style-type: none"> a) outside of a designated Centre zone and exceeding a GFA of 150m²; or b) within a designated Centre zone, but exceeding the maximum GFA for that Centre zone; or c) within the Mixed use zone and exceeding a GFA of 1,500m².
Structure plan	At Councils discretion. Applications proposing the development of five (5) or more lots (including those lots created under a community title scheme) may be required to undertake this report.
Traffic impact assessment report	At Councils discretion. Applications proposing the development of the following activities may be required to undertake this report: <ul style="list-style-type: none"> a) Accommodation activities: Five (5) or more lots (including those lots created under a community title scheme); or b) Business, Entertainment, Industry, Recreation or Other Activities: Exceeding a GFA of 1,500m²; or c) Community Activities: Exceeding a GFA of 500m².

SC6.2 Environmental features planning scheme policy

SC6.2.1 Introduction

SC6.2.1.1 Relationship to the Planning Scheme

- (1) This planning scheme policy provides:
 - (a) information the Council may request for a development application; and
 - (b) guidance or advice about satisfying an assessment benchmark which identifies this planning scheme policy as providing that guidance or advice.

SC6.2.1.2 Purpose

- (1) The purpose of this planning scheme policy is to provide information, guidance and advice for satisfying the assessment benchmarks for the preparation of a site specific:
 - (a) Acid sulfate soil assessment report;
 - (b) Acid sulfate soils management plan;
 - (c) Ecological assessment report; and
 - (d) Vegetation management plan.

SC6.2.1.3 Environmental features overlay mapping

- (1) Environmental features overlay mapping has been prepared for the local government area, showing the areas of environmental and waterway (water quality) health. This mapping has been prepared in accordance with the requirements of the State Planning Policy (SPP). The specific environmental and waterways overlays to which this PSP applies are:
 - (a) Acid sulphate soils overlay code. Mapping:
 - (i) identifies the Known presence of acid sulfate soils for; Land at or below 5m AHD and Land above 5m AHD and below 20m AHD sub-categories; and
 - (ii) has been prepared at a scale at which a site specific investigation of acid sulfate soils will be necessary to determine the presence and extent of acid sulfate soil on a site (Acid sulfate soils assessment report) and the necessity for an Acid sulfate soils management plan;
 - (b) Environmental significance overlay code. Mapping:
 - (i) identifies Regulated vegetation, Wildlife habitat, Protected and Regulated vegetation features; and
 - (ii) is not a substitute for a site based assessment. A site specific Ecological assessment report should be undertaken and prepared to verify, specific to the site, the presence of Matters of environmental significance on a site and necessity for a Vegetation management plan;
 - (c) Waterways and wetlands overlay code. Mapping:
 - (i) identifies Matters of state environmental significance: High ecological value waters (watercourse), High ecological value waters (wetlands), High ecological significance wetlands, Marine

- 
- (ii) parks and Declared fish habitat area and Matters of local environmental significance: Stream order 1 - 5 sub-categories; and is not a substitute for a site based assessment. A site specific Ecological assessment report should be undertaken and prepared to verify, specific to the site, the presence of matters of environmental significance on a site and necessity for a Vegetation management plan.

SC6.2.2 Requirements of environmental features documentation

- (1) Environmental features documentation is to be prepared in a clear and concise manner, consistent with the elements identified in Table SC 6.2.2.1 (Requirements of Environmental features documentation) below, as well as any specific requirements identified in the relevant sub-sections of this report.

Table SC 6.2.2.1 Requirements of environmental features documentation

Documentation	Preparation	Report requirements
Acid sulfate soils assessment report	<ul style="list-style-type: none"> Prepared by a suitably qualified professional with appropriate technical expertise in the field of acid sulfate soils identification and management. Consultation with other entities may also be necessary including Council, State government and other relevant agencies or individuals. 	<ul style="list-style-type: none"> A site specific Acid sulfate soils assessment report may be requested to provide additional information to Council. A site specific Acid sulfate soil assessment report is to be prepared in accordance with SC6.2.3 (Acid sulfate soils assessment report). An Acid sulfate soils assessment is to be prepared in accordance with the Queensland Acid Sulfate Soils Technical manual (Queensland Government, 2014), or any later guideline as agreed by Council and is to be provided as part of the site specific Acid sulphate soil assessment report. All investigations, testing and design should be undertaken in accordance with industry practice and the provisions of relevant Australian Standards.
Acid sulfate soils management plan	<ul style="list-style-type: none"> Prepared by a suitably qualified professional with appropriate technical expertise in the field of acid sulfate soils identification and management. Consultation with other entities may also be necessary including Council, State government and other relevant agencies or individuals. 	<ul style="list-style-type: none"> A site specific Acid sulfate soils management plan may be requested to provide additional information to Council. A site specific Acid sulfate soil management plan is to be prepared in accordance with: <ol style="list-style-type: none"> SC6.2.4 (Acid sulfate soils management plan); and State Planning Policy – State interest guideline: Water quality, August 2014, or any later guideline as agreed by Council.
Ecological assessment report	<ul style="list-style-type: none"> Prepared by a suitably qualified professional with a relevant tertiary qualification in ecology, conservation biology or environmental planning and at least 5 years' experience in ecology surveys, assessment and reporting. Consultation with other entities may also be necessary including Council, State government and other relevant agencies or individuals. 	<ul style="list-style-type: none"> A site specific Ecological assessment report may be requested to provide additional information to Council. A site specific Ecological assessment report is to be prepared in accordance with SC6.2.5 (Ecological assessment report).

<p>Vegetation management plan</p>	<ul style="list-style-type: none"> • Prepared by a suitably qualified professional with a relevant tertiary qualification in ecology, conservation biology or environmental planning and at least 5 years' experience in vegetation management, assessment and reporting. • Consultation with other entities may also be necessary including Council, State government and other relevant agencies or individuals. 	<ul style="list-style-type: none"> • A site specific Vegetation management plan may be requested to provide additional information to Council. • A site specific Vegetation management plan is to be prepared in accordance with SC6.2.6 (Vegetation management plan).
-----------------------------------	--	--

SC6.2.3 Acid sulfate soils assessment report

SC6.2.3.1 Purpose of an Acid sulfate soils assessment report

- (1) An Acid sulfate soils assessment report is required to:
 - (a) quantify the extent and severity of acid sulfate soils for a particular site;
 - (b) ensure appropriate methods are implemented to mitigate or avoid the disturbance of acid sulfate soils; and
 - (c) provide information and guidance to support the outcomes required by the Acid sulfate soils overlay code.

SC6.2.3.2 Preparation of an Acid sulfate soils assessment report

- (1) The site-specific Acid sulfate soils assessment report is to include an acid sulfate soils assessment, as detailed in Table SC 6.2.2 (Requirements of environmental features documentation) of this planning scheme policy.
- (2) An Acid sulfate soil assessment report is to:
 - (a) explain the methodology and findings of the acid sulfate soils assessment to determine the presence, extent and severity of any actual acid sulfate soils or potential acid sulfate soils on the site;
 - (b) evaluate the potential for harm to the environment or to constructed assets as a result of the development; and
 - (c) make recommendations as to whether management measures are needed.
- (2) If the acid sulfate soil assessment report finds that acid sulfate soils will be affected by the development, then an Acid sulfate soil management plan is to be prepared in accordance with SC6.2.4 (Acid sulfate soils management plan).

SC6.2.4 Acid sulfate soils management plan

SC6.2.4.1 Purpose of an Acid sulfate soils management plan

- (1) An Acid sulfate soils management plan is required to:
 - (a) explain how acid sulfate soils will be managed on the site to minimise or prevent harm to the environment or to constructed assets; and
 - (b) provide information and guidance to support the outcomes required by the Acid sulfate soil overlay code.

SC6.2.4.2 Preparation of an Acid sulfate soils management plan

- (1) An Acid sulfate soil management plan is to include at a minimum:
 - (a) a two-dimensional map of the actual or potential acid sulfate soils to the depth of disturbance;
 - (b) details that reflect potential on-site and off-site impacts of the disturbance on the soil and the groundwater levels;
 - (c) the methods that will be used to avoid, treat or otherwise manage acid sulfate soils, including the contained on-site management and treatment of potential and actual acid sulfate soils;
 - (d) the details of any pilot project or field trial to be undertaken to prove the effectiveness of any new technology or innovative management practice being proposed;
 - (e) details of the management of the height of the groundwater table on-site and off-site both during and after construction;
 - (f) details of all soil and water monitoring, both manual and automated, to be performed during and after treatment, and including verification testing of soils;
 - (g) details of the handling and storage of neutralising agents;
 - (h) details of contained on-site treatment and management of potentially contaminated stormwater run-off, and leachate including details of groundwater management associated with the works both in the short and long term;
 - (i) a description of contingency measures to be implemented on and off the site if the management procedures prove to be unsuccessful and acid is generated or leachate problems occur; and
 - (j) details of the treatment and management of surface drainage waters for disturbed acid sulfate soils.
- (2) The Acid sulfate soil management plan is to provide for the ongoing management and monitoring of impacts of acid sulfate soil material throughout the construction and operation of the project and describe the construction schedules and environmental management procedures.
- (3) The development is to be staged so that the potential impact of any area disturbed at any one time is limited and easily managed. Documentation containing the schedule of monitoring is to be made available for Council inspections.

- 
- (4) Action is to be taken to prevent or minimise any adverse impacts on surface water, groundwater, the site and surrounding areas. These actions are to be documented in the acid sulfate soil management plan and include:
- (a) objectives and outcomes;
 - (b) management measures;
 - (c) performance indicators;
 - (d) elements to be monitored;
 - (e) a monitoring schedule;
 - (f) contingency plans;
 - (g) responsibilities;
 - (h) reporting and review requirements; and
 - (i) training arrangements.

SC6.2.5 Ecological assessment report

SC6.2.5.1 Purpose of an Ecological assessment report

- (1) An Ecological assessment report is required to:
 - (a) quantify the matters of environmental significance on a particular site;
 - (b) ensure appropriate methods are implemented to appropriately protect, manage or restore matters of environmental significance on the site; and
 - (c) provide information and guidance to support the outcomes required by the Environmental significance overlay code and Waterways and wetlands overlay code.

SC6.2.5.2 Undertaking an Ecological assessment report

- (1) An Ecological assessment report is to incorporate a tree survey plan in accordance with SC6.2.5.3 (Preparation of a Tree survey plan), which identifies all the trees on the development site.
- (2) Prior to any field survey work commencing, records are to be investigated to identify likely regional ecosystems, flora, and fauna species (including weed and pest animal species) which may occur on the site or on adjoining lands within a one kilometre radius of the site. Records to be investigated include:
 - (a) research reports;
 - (b) local knowledge (such as from local catchment and environment groups);
 - (c) databases, such as the Council and Queensland Government regional ecosystem mapping, and flora and fauna records held by the Queensland Government (Wildnet), Queensland Museum and Queensland Herbarium; and
 - (d) published literature.
- (3) The field survey is to assess the presence or likely presence of ecological features, significant vegetation communities, and flora and fauna species (including weed and pest animal species) on the site. Specifically, it should:
 - (a) incorporate coverage of all major habitat types on the site;
 - (b) use survey techniques suited to a diversity of flora and fauna; and
 - (c) consider seasonal variations, survey duration and climatic conditions.
- (4) Ecological features and processes are essential to the conservation of biodiversity and the maintenance of ecosystem services. Some examples of ecological features and processes which need to be identified on or adjoining the site are:
 - (a) areas that contain nationally and internationally important flora, fauna, ecological communities and heritage places as identified in the *Environment Protection and Biodiversity Conservation Act 1999*;
 - (b) areas declared as Fish Habitat Areas under the *Fisheries Act 1994*;

- (c) areas prescribed under the *Nature Conservation Act 1992*, including areas subject to an Interim Conservation Order and areas subject to a conservation plan;
 - (d) areas identified as having conservation significance under the *Coastal Protection and Management Act 1995*;
 - (e) important habitat features or evidence of fauna species, such as trees supporting scratch marks and hollows, stags, scats, tracks and other traces, fruit and seed falls, fauna trails, fallen logs, termite mounds, ground diggings, rock outcrops, nests in banks and roost, nest and den trees;
 - (f) areas that would be suitable for habitat restoration, consolidating any existing habitat on site or on adjoining sites.
- (5) To identify flora and vegetation communities, plot or transect-based survey methods are to be used when establishing a flora species inventory, weed survey, or searching for significant flora species. All vegetation communities, including wetlands and, within these, all microhabitats (such as dry gullies) are to be identified. The regional ecosystem type is to be classified and the age, structure, composition and condition of the vegetation is to be assessed. Plans and literature may also have flora and fauna records.
- (6) For fauna surveys, a minimum of 4 days and 4 nights of survey time are recommended to minimise any sampling duration influences within any given sampling period. Regard must also be had for any migratory species which may not be present but habitually use the location. In circumstances where less sampling effort is proposed, appropriate justification is to be provided in the ecological assessment report. The biodiversity survey principles to be considered when undertaking a fauna survey include:
- (a) survey methodology which accounts for habitat diversity and species requirements;
 - (b) survey design to minimise factors which may reduce the quality of the survey results;
 - (c) data is collected in a consistent format; and
 - (d) ecological investigations in accordance with best-practice research ethics.
- (7) Fauna data is to be supported by the start and end dates of the survey, coordinates of the survey location, scientific and common name of identified species and the location precision.
- (8) Identify any existing impacts or threatening processes to the ecological features, vegetation communities (regional ecosystems) and flora and fauna species on the site.
- (9) Outline the likely impacts of development on the ecological features and flora and fauna species. Examples of spatial and temporal impacts from development include:
- (d) loss or fragmentation of habitat;
 - (e) decrease or change in structure, composition, complexity and connectivity of vegetation;
 - (f) increased edge effects, such as noise and light;

- (g) earthworks and installation of infrastructure, such as retaining walls, paths, roads, stormwater treatment devices;
- (h) weed and pest animal invasion;
- (i) changes to fire risks and regimes;
- (j) changes to flow regimes, nutrients, sediment and pollutant loads;
- (k) barriers to safe wildlife movement such as roads or fences; and
- (l) introduction of domestic animals.

SC6.2.5.3 Preparation of a Tree survey plan

- (1) A Tree survey plan forms part of the Ecological assessment report (SC6.2.5.4 Preparation of an Ecological assessment report) and involves identifying, assessing and surveying all trees on a site and provides a description of the site and the proposed works.
- (2) The Tree survey plan comprises a map and a supporting table or report outlining the location and other attributes of trees located on the site. It is to incorporate the following information:
 - (a) a scaled tree survey map overlaid on the development layout, identifying the location of:
 - (i) individual trees, ensuring each tree is numbered and the area of the canopy spread is shown indicatively;
 - (ii) those trees proposed for retention;
 - (iii) those trees proposed for removal; and
 - (iv) any tree protection zones;
 - (b) a table which includes:
 - (i) the number for each tree identified on the tree survey map;
 - (ii) tree species (botanical and common names);
 - (iii) height;
 - (iv) diameter at breast height;
 - (v) canopy spread (in square metres);
 - (vi) condition/health;
 - (vii) evidence of fauna use or habitat value including scratch marks, hollows, nests, termites and scats;
 - (viii) trees to be removed or root zones to be impacted; and
 - (ix) trees to be retained;
 - (c) photographs of the site, key tree species and evidence of fauna use, where relevant; and
 - (d) any other supporting information provided by a qualified arborist.

SC6.2.5.4 Preparation of an Ecological assessment report

- (1) The Ecological assessment report informs the design of the development layout and footprint and is to be completed prior to the development design and layout.
- (2) The level of detail contained within the Ecological assessment report will vary, reflecting the nature of the development and site attributes. The report is to include at a minimum:
 - (a) a description of the methodology used to complete the assessment:

- (i) provide a full description of the field survey methodology used and assumptions made;
 - (ii) detail all background investigations undertaken including literature reviewed, and recognised specialists, authorities and local naturalists consulted or referenced; and
 - (iii) reports that rely primarily on desktop research with little or no field-based work are not acceptable;
- (b) a description and map of the ecological features and processes, vegetation communities and flora and fauna species of the site and adjacent lands will at a minimum:
- (i) identify and detail ecological features and provide a map displaying the location and extent of the ecological features. This is referred to as an ecological features map. Appropriate photographs and figures will enable the identification and location of ecological features on the ground;
 - (ii) in addition to identifying ecological features, the Ecological Features map is also to include:
 - (A) 1m contours for the existing site topography;
 - (B) areas included in the Environmental significance overlay map;
 - (C) location of waterway corridors and wetlands as shown on the Waterway and wetlands overlay map;
 - (D) existing buildings and infrastructure such as roads or sewer lines; and
 - (E) nature and extent of any vegetation protected under the *Vegetation Management Act 1999*;
 - (iii) describe key ecological processes occurring on the site and adjacent lands;
 - (iv) include appropriate photographs, figures and maps that will enable the identification and location of ecological features on the ground;
 - (v) accurately map and describe the vegetation communities, (remnant and non-remnant vegetation) in the site and on adjacent lands. Include details such as age, structure, composition and condition of vegetation communities on the site and on adjacent lands;
 - (vi) describe and map accurately the terrestrial and aquatic flora species and vegetation communities (including details such as age, structure, composition, condition, State/national significance and regional ecosystem status) in the site and on adjacent lands. A table outlining the location and attributes of trees on the development site should also be provided;
 - (vii) document and describe the presence of any flora species listed as threatened under Commonwealth or State legislation;
 - (viii) provide any past flora and fauna records of the site and adjoining lands within a 1km radius of the site. Records include research reports, local knowledge and databases, such as the Queensland Museum and Queensland Herbarium records;
 - (ix) identify terrestrial and aquatic fauna species present or likely to be present within the site and adjacent lands;
 - (x) prepare an appropriately scaled map identifying the location of key habitat features or evidence of fauna species, including trees supporting scratch marks and hollows, stags, fruit and seed falls, fauna trails, fallen logs, termite mounds, ground diggings, rock outcrops, nests in banks and roost, nest and den trees; and
 - (xi) document and describe the presence of any fauna species.
- (c) document potential development impacts on ecological features and processes including:
- (i) an outline of the proposed development:

- (A) nature of the land use;
 - (B) the extent of the development footprint and details of the site layout; and
 - (C) development design including the building height in metres, location of any outdoor lighting, audio systems or other noise generating activities;
 - (ii) identification of the proposed hours of operation if non-residential including:
 - (A) the number of people anticipated on site at various times during the day and night; and
 - (B) the number and type of vehicle movements anticipated on site during the ongoing operation phase;
 - (iii) for the construction phase, details of the sequence of any proposed vegetation clearing, type of construction machinery and proposed barriers to restrict site access to ecologically sensitive areas;
 - (iv) differentiation between the impacts likely to occur during the construction of the development versus those impacts resulting from the ongoing operation of the development (including cumulative impacts of the development); and
 - (v) details of potential spatial (on-site and off-site) and temporal (short- and long-term) direct and in-direct impacts from the development on flora and fauna species and vegetation communities, including consideration of the construction and operational phases of the development. Specifically discuss the likely consequences of the identified impacts for the site and adjacent lands;
 - (vi) the degree of confidence with which the impacts of the action are known and understood;
- (d) detail how the layout of the development avoids impacts to the ecological features and processes and significant flora and fauna species and outline the impact mitigation measures that will be undertaken to reduce the impacts to ecological features and processes by:
- (i) clearly demonstrating how the proposed mitigation strategies will enable the development to meet the nature conservation obligations as described in the relevant statutory planning mechanisms; and
 - (ii) providing information about development designs to mitigate impacts to ecological features and processes, such as:
 - (A) protecting ecological connectivity;
 - (B) enhancing habitat extent and condition; and
 - (C) rehabilitating degraded areas.

SC6.2.6 Vegetation management plan

SC6.2.6.1 Purpose of a Vegetation management plan

- (1) A Vegetation management plan is required to ensure appropriate methods are implemented to appropriately protect against, manage or restore the disturbance of vegetation before, during and after construction works on a site.
- (2) A Vegetation management plan may be required prior to or as a condition of a development approval; in which case it is required to be lodged before the commencement of site works or any interference with vegetation.

SC6.2.6.2 Preparation of a Vegetation management plan

- (1) A Vegetation management plan is to comprise a plan of layout and supporting text.
- (2) The plan of layout is to include the following standard features as a minimum:
 - (a) cadastral and property boundaries and dimensions adequate to interpret the plan;
 - (b) layout of development, including existing and proposed alignments of services and infrastructure;
 - (c) location and description of vegetation to be retained, cleared and restored, including drainage lines, waterway corridors, wetlands and other ecological features;
 - (d) location of protective fences or other vegetation protection measures such as designated vehicle access, signage, tree guards and retaining clumps of trees for wind and storm protection;
 - (e) contours (including areas for proposed filling and excavation);
 - (f) location and type of erosion measures;
 - (g) location of dedicated work areas including stockpile and disposal sites; and
 - (h) location of machinery access ways.
- (3) The supporting text is a critical component of a Vegetation management plan and reports on the four main steps of vegetation management processes, namely:
 - (a) project management;
 - (b) vegetation protection;
 - (c) clearing and disposal; and
 - (d) rehabilitation and maintenance.
- (4) Each step is presented in Table SC 6.2.6.2.1 (Vegetation management plan preparation) with suggested approaches as to how to achieve the key aims and outcomes.

Table SC 6.2.6.2.1 Vegetation management plan preparation

Key aims or outcomes	Suggested approach
A. Project Management	
• To formulate and implement vegetation	• Vegetation management plan to be

<p>management actions.</p> <ul style="list-style-type: none"> • To clearly identify objectives, methods and reporting lines. • To inform all relevant people, companies and workers of their responsibilities. 	<p>prepared in conjunction with engineering requirements.</p> <ul style="list-style-type: none"> • Vegetation management to be an integral part of the construction and operational phases. • Nominate a person with responsibility for overseeing development works (such as the site supervisor), a person responsible for implementing vegetation management plan actions on site, and a person for point-of-contact for the Council. • Instruct all workers and contractors as to their role in vegetation management. • Provide the method of assessing compliance with the vegetation management plan.
<p>B. Vegetation protection</p>	
<ul style="list-style-type: none"> • To effectively protect vegetation during construction and operational phases. 	<ul style="list-style-type: none"> • Identify vegetation for removal and protection on a vegetation retention plan. • Refer to appropriate Australian Standards e.g. AS 4970-2009 (Protection of trees on development sites), and AS 4373-2007 (Pruning of amenity trees). • Implement vegetation protection measures during construction. These commonly include designated vehicle access ways, signage, protective barrier fences, silt fences, tree guards and dedicated work areas. Establish these measures prior to works commencing and maintain the measures throughout the construction phase. • Protect the root zones of individual trees or clumps of trees from compaction, filling, stockpiling or excavation. Refer to AS 4373-2007 (Pruning of amenity trees). • Identify a replacement formula for trees which are damaged.
<p>C. Clearing and disposal</p>	
<ul style="list-style-type: none"> • To minimise the adverse impacts of vegetation clearance. • To maximise recycling or re-use of cleared vegetation. • To minimise the impacts on existing fauna. 	<ul style="list-style-type: none"> • Clearly identify and indicate on a plan the area of vegetation proposed to be cleared in relation to tree protection zones and structural root protection zones. • Use clearing methods that will not damage adjacent protected vegetation and that will minimise soil profile disturbance. Match the type of equipment to be used with the specific clearing task. There are many options available, including excavator-mounted hydraulic grabs etc. • Recycle cleared vegetation for re-use on or off site. Recycling techniques include mulching, tub-grinding, wood chipping and salvage. Do not recycle weed materials as this has potential to spread weed propagules. • Obtain advice from a qualified arborist when work is proposed within the tree

	<p>protection zone.</p> <ul style="list-style-type: none"> • Clear vegetation sequentially to allow for natural retreat of fauna. • Employ a suitably qualified fauna spotter and a fauna catcher during the vegetation clearing and disposal phase of the project.
<p>D. Rehabilitation and maintenance</p>	
<ul style="list-style-type: none"> • To restore and enhance areas in the post-construction phase. • To maximise survival opportunities for areas of retained vegetation and newly rehabilitated areas. 	<ul style="list-style-type: none"> • Use species native to the site, including species known to provide food and habitat for native fauna or those species identified in SC6.4.5 (Planting species list). • Use a mix of species which replicate all strata in the nominated Regional Ecosystem that was originally on site pre-clearing. • Use species to augment the functioning of ecological corridors and nodes through the site. • Do not use plants that will compete with or displace existing local native species, or that have the potential to become new and emerging weed species. • Specify a maintenance program in the Vegetation management plan to ensure the long-term health and vigour of retained vegetation and healthy growth of new plantings, including specified growth targets. Give details on mulching, watering and fertiliser regimes, regular inspection schedules for damage or disease, replacement planting criteria and weed control measures.

SC6.3 Heritage planning scheme policy

SC6.3.1 Introduction

SC6.3.1.1 Relationship to the Planning Scheme

- (1) This planning scheme policy provides:
 - (a) information the Council may request for a development application; and
 - (b) guidance or advice about satisfying an assessment benchmarks which identifies this planning scheme policy as providing that guidance or advice.

Note – This planning scheme policy does not remove obligations under the *Queensland Heritage Act 1992* for places identified on the Queensland Heritage Register.

SC6.3.1.2 Purpose

- (1) The purpose of this planning scheme policy is to provide information, guidance and advice for satisfying the assessment benchmarks for the preparation of a site specific:
 - (a) Heritage impact assessment report;
 - (b) Heritage management plan; and
 - (c) Archaeological management plan.

SC6.3.1.3 Heritage overlay mapping

- (1) Heritage overlay mapping has been prepared for the local government area, showing the areas of local and state heritage significance. This mapping has been prepared in accordance with the requirements of the SPP. The specific overlay to which this PSP applies is:
 - (a) Heritage overlay code. Mapping:
 - (i) identifies the State heritage place and Local heritage place features.

SC6.3.2 Requirements of heritage documentation

- (1) Heritage documentation to be prepared in a clear and concise manner, consistent with the elements identified in Table SC 6.3.2.1 (Requirements of heritage documentation) below, as well as any specific requirements identified in the relevant sub-sections of this report.

Table SC 6.3.2.1 Requirements of heritage documentation

Documentation	Preparation	Report requirements
Heritage impact assessment report	<ul style="list-style-type: none"> Prepared by a suitably qualified professional with tertiary qualification in an area related to heritage conservation and appropriate technical expertise in the field of cultural heritage identification and mitigation. Consultation with other entities may also be necessary including Council, State government and other relevant agencies or individuals. 	<ul style="list-style-type: none"> A site specific Heritage impact assessment report may be requested to provide additional information to Council. A site specific Heritage impact assessment report is to be prepared in accordance with: <ol style="list-style-type: none"> SC6.3.3 (Heritage impact assessment report); the Burra Charter: The Australian ICOMOS Charter for places of cultural heritage significance (1999); and the <i>Aboriginal Cultural Heritage Act 2003</i>. All investigations, testing and design should be undertaken in accordance with industry practice and the provisions of relevant Australian Standards.
Heritage management plan	<ul style="list-style-type: none"> Prepared by a suitably qualified professional with tertiary qualification in an area related to heritage conservation and appropriate technical expertise in the field of cultural heritage identification and mitigation. Consultation with other entities may also be necessary including Council, State government and other relevant agencies or individuals. 	<ul style="list-style-type: none"> A site specific Heritage management plan may be requested to provide additional information to Council. --	---	---

SC6.3.3 Heritage impact assessment report

SC6.3.3.1 Purpose of a Heritage impact assessment report

- (1) A Heritage impact assessment report is required to:
 - (a) quantify the extent and severity of potential damage to or impacts on a Heritage place; and
 - (b) provide information and guidance to support the outcomes required by the Heritage overlay code.

SC6.3.3.2 Preparation of a Heritage impact assessment report

- (1) A Heritage impact assessment report is to include at a minimum:
 - (a) a description of the history of the place and a description of the place (including any relevant components, contents, spaces and views that contribute to the significance of the place noted in the Place Card);
 - (b) a review of the Statement of Significance of the place;
 - (c) reference to an existing Conservation management plan or Archaeological management plan and the management policies included in either plan (if available);
 - (d) plans or some form of documentation that illustrate the development plan and site layout;
 - (e) a heritage impact statement (based on the principles of the Burra Charter: The Australian ICOMOS Charter for places of cultural heritage significance), including:
 - (i) photographs of the Heritage place;
 - (ii) the identification of the aesthetic, architectural, historical, scientific and social or technological significance; and
 - (iii) the demonstration that proposed development conserves, or minimises the impact on, the significance of the place and, if relevant, reflects the management policies contained in the Conservation management plan or Archaeological management plan;
 - (f) if it is determined that the proposed development will impact the significance of the place, information must be provided to demonstrate why the change is required, what options were considered and what measures are provided to reduce the detrimental impact that may result from the change; and
 - (g) list any references used in the production of the statement and any relevant technical information or correspondence from government departments.

SC6.3.4 Heritage management plan

SC6.3.4.1 Purpose of a Heritage management plan

- (1) A Heritage management plan is required to:
 - (a) identify the strategies and management techniques a development is to implement to mitigate or reduce adverse impacts on a Heritage place as a result of development; and
 - (b) provide information and guidance to support the outcomes required by the Heritage overlay code.

SC6.3.4.2 Preparation of a Heritage management plan

- (1) A Heritage management plan is to include at a minimum:
 - (a) an outline of the significance of the place, the conditions of approval for development to a Heritage place and particular requirements to manage the significance of the place during development, including where necessary an archival recording of the place where demolition or removal is required;
 - (b) a description of the extent of the heritage boundary and the specific heritage features within the boundary;
 - (c) an outline of the requirements for the management of any approved works within sensitive areas, including:
 - (i) council conditions of approval for the work;
 - (ii) work method statements for work requiring particular care and attention to appropriate conservation methods; and
 - (iii) training of contractors, including 'tool box talks';
 - (d) an assessment of the risk inherent in particular activities to the significance of the place and appropriate mitigation and/or monitoring responses; and
 - (e) a procedure for the incidental discovery of items of potential cultural heritage significance, including archaeological artefacts.

SC6.3.5 Archaeological management plan

SC6.3.5.1 Purpose of an Archaeological management plan

- (1) An Archaeological management plan is required to:
 - (a) provide additional information regarding the extent and severity of ground-breaking activities on a site;
 - (b) identify the management activities which will be undertaken to reduce adverse impacts as a result of development that has been identified as an archaeological place; and
 - (c) provide information and guidance to support the outcomes required by the Heritage overlay code.

SC6.3.5.2 Preparation of an Archaeological management plan

- (1) An Archaeological management plan is to be prepared in accordance with Table SC6.3.2 (Requirements of heritage documentation) and include at a minimum:
 - (a) descriptions of the significant archaeological features and artefacts of a place, or the potential for archaeological features and artefacts to be present, and the proposed methodology to manage impacts on the features and artefacts during approved ground-breaking activity, including the procedure to manage unexpected discoveries;
 - (b) outline of the methodology for evaluating the extent, nature and integrity of the site and its significance should ground breaking activities be unavoidable;
 - (c) definitions of the appropriate management measures for the site, having regard to its potential significance, inclusive of the establishment of any ground disturbance exclusion zones and/or monitoring areas;
 - (d) specification of the process for dealing with new/unexpected finds of an archaeological nature resulting from ground-breaking activities, including advising Council of any such discovery; and
 - (e) an outline of the process for the curation and long-term ownership and management of any archaeological material collected as a result of development activities within the curtilage of a Heritage place that has been identified as an archaeological place.

SC6.4 Landscaping planning scheme policy

SC6.4.1 Introduction

SC6.4.1.1 Relationship to the Planning Scheme

- (1) This planning scheme policy provides:
 - (a) information the Council may request for a development application; and
 - (b) guidance or advice about satisfying an assessment benchmarks which identifies this planning scheme policy as providing that guidance or advice.

SC6.4.1.2 Purpose

- (1) The purpose of this planning scheme policy is to provide information, guidance and advice for satisfying the assessment benchmarks for the preparation of a site specific:
 - (a) Landscaping plan;
 - (b) Landscaped separation buffer plan; and
 - (c) Planting species list.

SC6.4.2 Requirements of landscaping documentation

- (1) Landscaping documentation to be prepared in a clear and concise manner, consistent with the elements identified in Table SC 6.4.2.1 (Requirements of landscaping documentation) below, as well as any specific requirements identified in the relevant sub-sections of this report.

Table SC 6.4.2.1 Requirements of landscaping documentation

Documentation	Preparation	Report requirements
Landscaping plan	<ul style="list-style-type: none"> Prepared by a suitably qualified professional with appropriate technical expertise in landscape architecture, horticulture or similar Consultation with other entities may also be necessary including Council, State government and other relevant agencies or individuals. 	<ul style="list-style-type: none"> A site specific Landscaping plan may be requested to provide additional information to Council. A site specific Landscaping plan is to be prepared in accordance with <ol style="list-style-type: none"> SC6.4.3 (Landscaping plan); SC6.4.5 (Planting species list); and SC6.8 (WRC development manual).
Landscaped separation buffer plan	<ul style="list-style-type: none"> Prepared by a suitably qualified professional with appropriate technical expertise in the identification and mitigation of agricultural or industrial impacts or the design of landscaped buffers. Consultation with other entities may also be necessary including Council, State government and other relevant agencies or individuals. 	<ul style="list-style-type: none"> A site specific landscaped separation buffer plan may be requested to provide additional information to Council. A site specific Landscaped separation buffer plan is to be prepared in accordance with <ol style="list-style-type: none"> SC6.4.4 (Landscaped separation buffer plan); SC6.4.5 (Planting species list); and SC6.8 (WRC development manual).
Planting species list	-	-

SC6.4.3 Landscaping plan

SC6.4.3.1 Purpose of a Landscaping plan

- (1) A landscaping plan is required to:
 - (a) identify the suitable purposes and specifies plants recommended to be established on the site; and
 - (b) ensure appropriate methods and management activities are implemented to ensure survival of vegetation; and
 - (c) provide information and guidance to support the outcomes required by the Landscaping code.

SC6.4.3.2 Preparation of a Landscaping plan

- (1) A Landscaping plan is to include a plan of layout and supporting text.
- (2) A description and dimensioned site plan (drawn to an appropriate metric scale) is to include at a minimum:
 - (a) the project description and location;
 - (b) landscape architect / designer's name and contact details;
 - (c) the date on which the plan was prepared together with a plan number which clearly identifies the plan and any amendments thereof;
 - (d) the location of property boundaries, road alignments and street names;
 - (e) the location of underground and overhead services, including drainage, sewerage, power lines, electricity, telephone and gas;
 - (f) the location, botanical name and size of existing trees and shrubs and intended retention or removal of these plants to be clearly nominated;
 - (g) contours and spot levels, both existing and proposed to all surfaces, including levels at the base of all existing vegetation to be retained, and surface levels of paved areas and access covers;
 - (h) location and design of proposed stormwater drainage works including direction of overland flow, location of field inlets (as required) and methods to ensure erosion control;
 - (i) details of the location of any earth cuts, fills or mounds within landscaped areas and details of proposed measures to ensure stability, including location, height and materials of retaining walls;
 - (j) location of all existing and proposed buildings, landscape structures, storage areas, pathways, driveways and parking areas, outdoor furniture (where relevant e.g. centres) and fencing;
 - (k) details including design, materials used and colours of proposed edging, surface treatments, fencing, pergolas and raised gardens;
 - (l) location and nature of all proposed vegetation including:
 - (i) a graphic code/key (as nominated on the plan);
 - (ii) scientific or botanical names of plants;

- (iii) common names of plants (not essential);
 - (iv) spread at maturity;
 - (v) height at time of planting (measured from pot soil level to top of growing tip) (not essential);
 - (vi) crown width at time of planting (not essential); and
 - (vii) quantity of each species used;
- (m) evidence of measures taken for conservation, protection and maintenance of sites which have environmental, ecological, cultural, architectural, historic, scenic, visual, streetscape or scientific significance; and
- (n) a maintenance plan, detailing the intended arrangements for maintenance of the landscaping, and the conservation, protection and maintenance of significant sites, including at a minimum, the schedule for:
 - (i) weed control;
 - (ii) irrigation and watering;
 - (iii) plant maintenance and pruning; and
 - (iv) fertilizer management.

SC6.4.4 Landscaped separation buffer plan

SC6.4.4.1 Purpose of a Landscaped separation buffer plan

- (1) A landscaped buffer plan is required to:
 - (a) achieve appropriate separation between:
 - (i) sensitive land uses and Rural, Special industry or High impact industry zones; or
 - (ii) major infrastructure elements (such as State-controlled roads) and sensitive uses; or
 - (iii) environmentally significant areas or edges of existing Native vegetation from development;
 - (b) ensure appropriate mitigation methods and management activities are implemented to reduce the potential conflict between incompatible uses; and
 - (c) provide information and guidance to support the outcomes required by the Landscaping code, Reconfiguring a lot code and the Agricultural land overlay code.

SC6.4.4.2 Preparation of a Landscaped separation buffer plan

- (1) A Landscaped separation buffer plan is to include a plan of the layout and supporting text.
- (2) A description and dimensioned site plan (drawn to an appropriate metric scale) is to include at a minimum:
 - (a) the project description and location;
 - (b) landscape architect / designer's name and contact details;
 - (c) the date on which the plan was prepared together with a plan number which clearly identifies the plan and any amendments thereof;
 - (d) the location of property boundaries, road alignments and street names;
 - (e) consideration and descriptions of the existence and location of surrounding land uses. The development should be in a position which will not result in the potential for land use conflict between neighbouring land uses;
 - (f) consideration of the nature of the buffer. Buffer areas may be temporary and can be reserved for public open spaces or further residential development once conflicting land use has ceased. Residential subdivision applications may contain mandatory identified buffer areas for development unless the development occurs after neighbouring agricultural activities have ceased;
 - (g) the extent of the buffer area, the location and spacing of the trees and shrubs with the provision of a list of tree and shrub species, having regard to the type of buffer required.
- (10) Separation buffers are to be provided between sensitive uses or any part of a lot included in a Residential zone, Emerging community zone or Rural residential zone and Rural or Industry zones. This buffer may be provided in the form of a landscaped separation buffer (distances set out in Table SC 6.4.4.2.1) or as an open space separation buffer (distances set out in Table SC 6.4.4.2.2).

- (a) To be effective, a landscaped separation buffer is to meet the following criteria:
- (i) be located as close as practicable to the point of release of the spray;
 - (ii) not be located on land used for a Rural activity;
 - (iii) provide a minimum landscaped separation distance in accordance with the dimensions of Table SC 6.4.4.2.1 (Landscaped separation buffer distances).

Table SC 6.4.4.2.1 Landscaped separation buffer distances

Zone/Existing Use	Total landscaped separation buffer distance (including fire break)
Rural zone	40m
Low impact industry zone	
Medium impact industry zone	
Waterfront and marine industry zone	
Low impact industry use	
Marine industry use	
Medium impact industry use	
Research and technology industry use	
Service industry use	
Warehouse use	
High impact industry zone	50m
High impact industry use	
Special impact zone	60m
Special industry use	

- (iv) provide a 10m cleared fire break area on either side of a vegetated strip (this fire break area is included within the total width of the landscaped separation buffer. Where the total width of landscaped separation buffer is 40m, 10m cleared area is located either side of a 20m wide vegetated area).
- (v) the vegetated area is to be comprised of a minimum of three rows ensuring there is foliage from base to crown with no gaps in the lower canopy:
 - (A) rows 1 and 3 are composed of short to medium sized tree species; and
 - (B) row 2 is composed of taller tree species.
- (vi) contain random plantings of a variety (at least 3) of tree and shrub species of differing growth habits, at a spacing of 2.5m and listed in Table SC 6.4.5.2.3 (Large screening shrubs and windbreaks) of PSP SC6.4.5 (Planting species list);
- (vii) provide a permeable barrier which allows air to pass through the buffer. A porosity of 0.5 is acceptable (that is, approximately 50% of the screen should be air space);
- (viii) have a mature tree height of 1.5 times the spray release height or target vegetation height, whichever is the highest;
- (ix) have mature height and width dimensions which do not detrimentally impact upon adjacent cropped land;
- (x) be planted in accordance with PSP SC6.8 (WRC development manual);
- (xi) be contained within a legal covenant which outlines maintenance requirements; and
- (xii) will not be considered operational until the trees reach the minimum effective height to control spray drift (1.5 times the spray release height or target vegetation height, whichever is the highest). Until then the landscaped separation buffer is to be maintained in line with a scheduled maintenance plan. The maintenance plan is to include at a minimum a schedule for:

- (A) weed control;
 - (B) irrigation and watering;
 - (C) plant maintenance and pruning; and
 - (D) fertilizer management.
- (xiii) Residential areas should not be developed within 300metres of the incompatible land uses until the buffer is considered as operational;

Note –

- (1) The precise design of the buffer will depend on many different factors including the chemicals used, method of application, the site, the proposed land-uses and the adjacent or nearby land uses and characteristics including road reserves and existing vegetation; and
- (2) Natural geographical features (watercourses and ridge lines), public open spaces, road reserves etc. can be incorporated into meeting the required distances.
- (b) To be effective, an open space buffer is to meet the following criteria:
- (i) be located as close as practicable to the point of release of the spray;
 - (ii) not be located on land used for a Rural activity; and
 - (iii) provide a minimum open space separation distance in accordance with Table SC 6.4.4.2.2 (Open space separation distances).

Table SC 6.4.4.2.2 Open space buffer distances

Industry	Open Space
Sugarcane	300m
Small Crops	300m
Orchards	300m
Grazing	60m

- (11) Landscaped separation buffers between major infrastructure elements (such as State-controlled roads) and sensitive uses or between environmentally significant areas or edges of existing native vegetation and development are to meet the following criteria:
- (a) earth mounding is provided where necessary to achieve satisfactory attenuation, visual screening or land use separation;
 - (b) selected plant species are appropriate to the location, drainage and soil type; meet the buffer's functional requirements and require minimal ongoing maintenance;
 - (c) plant selection includes a range of species in accordance with the SC6.4.5 (Planting species list) to provide variation in form, colour and texture to contribute to the natural appearance of the buffer;
 - (d) planting density results in the creation of upper, mid and understorey strata with:
 - (i) large trees planted at 6m centres;
 - (ii) small trees planted at 2m centres;
 - (iii) shrubs planted at 1m centres;
 - (iv) one plant per 1m along each row;
 - (v) each row being 3m apart;
 - (vi) a minimum of six species used in the buffer with a maximum species of 2 species of shrubs; and
 - (vii) tufting plants, vines and groundcovers are planted at 0.5m to 1m centres;
 - (e) where adjoining the edge of native vegetation or waterway understorey, shrubs and vines are used to bind appropriately the buffer edges against degradation and weed infestation; and

- 
- (f) is maintained in line with a scheduled maintenance plan until reaching its growth maturity. The maintenance plan is to include at a minimum a schedule for:
- (i) weed control;
 - (ii) irrigation and watering;
 - (iii) plant maintenance and pruning; and
 - (iv) fertilizer management.

SC6.4.5 Planting species list

SC6.4.5.1 Purpose of the planting species list

- (1) The purpose of this planting species list is to:
 - (a) identify suitable species of plants for establishing within the region; and
 - (b) identify suitable purposes for the species of plants recommended.

SC6.4.5.2 Planting species list

- (1) It should be noted that plants have been categorised according to their most likely purpose, but some will be multipurpose, for example most street trees can also be used in parks, and some of the smaller, compact street or park trees will also be useful screening plants.
- (2) The Planting species list contains the following recommended species:

Table SC 6.4.5.2.1 Verge/street trees plant list

Species	Common name	Wet/Dry	Height (m)	Locally Available
<i>Acacia leptostachya</i>	Townsville Wattle	D	2-5	
<i>Acacia oraria</i>	Coastal Wattle	W/D	5-10	Y
<i>Acmena smithii</i>	Lilly pilly	W	5-10	
<i>Alphitonia excelsa</i>	Red Ash	W	8-10	Y
<i>Brachychiton acerifolius</i>	Flame tree	W	10-15	Y
<i>Brachychiton australis</i>	Broad-leaved Bottle Tree	D	6-10	
<i>Callistemon viminalis</i>	Weeping Bottlebrush	W/D	8-18	Y
<i>Cassia brewsteri</i> syn <i>Senna brewsteri</i>	Leichardt Bean	W/D	2-8	
<i>Cassia tomentella</i>	Velvet Bean tree	W/D	6-12	Y
<i>Chionanthus ramiflora</i>	Native Olive	W	3-5	Y
<i>Cupaniopsis anacardioides</i>	Tuckeroo	W/D	15-25	Y
<i>Cupaniopsis wadsworthii</i>	Cut leaf tuckeroo	W	3-5	Y
<i>Diploglottis obovata</i>	Blunt Leaved Tamarind	W	5-10	Y
<i>Evodiella muelleri</i>	Little pink evodia	W	5-10	Y
<i>Gossia bidwillii</i>	Python wood	W	5-10	
<i>Grevillea baileyana</i>	Scrub Beefwood	W/D	10-15	
<i>Harpulia hillii</i>	Tulipwood	W	10-20	Y
<i>Harpulia pendula</i>	Tulip wood	W	10-20	Y
<i>Hymnosporum flavum</i>	Native frangipani	W	5-12	
<i>Larsenaikia jardinei</i>	Shiny Leaved Larsenaikia	W/D	10-15	Y

SC6.5 Natural hazards planning scheme policy

SC6.5.1 Introduction

SC6.5.1.1 Relationship to the Planning Scheme

- (1) This planning scheme policy provides:
 - (a) information the Council may request for a development application; and
 - (b) guidance or advice about satisfying an assessment benchmarks which identifies this planning scheme policy as providing that guidance or advice.

SC6.5.1.2 Purpose

- (1) The purpose of this planning scheme policy is to provide information, guidance and advice for satisfying the assessment benchmarks for the preparation of a site specific:
 - (a) Bushfire hazard assessment report;
 - (b) Bushfire management plan;
 - (c) Coastal hazard assessment report;
 - (d) Flood hazard assessment report;
 - (e) Landslide hazard (geotechnical) assessment report.

SC6.5.1.3 Hazard overlay mapping

- (1) Natural hazard mapping has been prepared for the local government area, showing the areas natural hazard susceptibility. This mapping has been prepared in accordance with the requirements of the SPP. The specific hazard overlays to which this PSP applies are:
 - (a) Bushfire hazard overlay code. Mapping:
 - (i) identifies the Very high risk, High risk and Medium risk sub-categories; and
 - (ii) has been prepared at a scale at which a site specific investigation of bushfire hazard will be necessary to determine the exact nature of the hazard on a site (Bushfire hazard assessment report) and the necessity for a Bushfire management plan;
 - (b) Coastal environment overlay code. Mapping:
 - (i) identifies Maritime development areas, High hazard and Medium hazard sub-categories for storm tide inundation, Coastal erosion and Permanent inundation due to sea level rise at 2100 sub-category;
 - (ii) is not a substitute for a site based assessment. A site specific Coastal hazard assessment should be undertaken to verify, specific to the site, the coastal hazard risk (unless provided by council) and appropriate mitigation responses to this;
 - (c) Flood hazard overlay code. Mapping:
 - (i) identifies predicted 1% AEP flood extent and Flood hazard area;

- (ii) is not a substitute for a site based assessment. A site specific flood hazard assessment should be undertaken to verify, specific to the site, the flood hazard risk (unless provided by council) and appropriate mitigation responses to this;
- (d) Landslide hazard overlay code. Mapping:
 - (i) identifies slope of 15% or greater; and
 - (ii) is not a substitute for a site based assessment. A site specific geotechnical assessment report should be undertaken to verify, specific to the site, the landslide risk and appropriate mitigation responses to this.

SC6.5.2 Requirements of natural hazard documentation

- (1) Natural hazard documentation is to be prepared in a clear and concise manner, consistent with the elements identified in Table SC 6.5.2.1 (Requirements of natural hazard documentation) below, as well as any specific requirements identified in the relevant sub-sections of this report.

Table SC 6.5.2.1 Requirements of natural hazard documentation

Documentation	Preparation	Report requirements
Bushfire hazard assessment report	<ul style="list-style-type: none"> Prepared by a suitably qualified professional with appropriate technical expertise in the identification of bushfire hazard. Consultation with other entities may also be necessary including Council, State government and other relevant agencies or individuals (e.g. Rural fire brigade). 	<ul style="list-style-type: none"> A site specific Bushfire hazard assessment report may be requested to provide additional information to Council. A site specific Bushfire hazard assessment report is to be prepared in accordance with SC6.5.3 (Bushfire hazard assessment report). All investigations, testing and design should be undertaken in accordance with industry practice and the provisions of relevant Australian Standards.
Bushfire hazard management plan	<ul style="list-style-type: none"> Prepared by a suitably qualified professional with appropriate technical expertise in the identification and mitigation and have: <ol style="list-style-type: none"> knowledge and experience in applying relevant legislation, plans, policies, standards and guidelines relating to bushfire hazard and fire ecology relating to Queensland requirements; or have knowledge and experience in developing bushfire management plans in accordance with the methodology set out in SC6.5.4 (Bushfire hazard management plan) of this planning scheme policy; or be accredited practitioner (BPAD Level 2/3) under the Bushfire Planning and Design Accreditation Scheme from the Fire Protection Association of Australia; or have qualifications and experience in the field of ecology, environmental management or similar to assess and protect site-based and strategic biodiversity values. Consultation with other entities 	<ul style="list-style-type: none"> A site specific Bushfire hazard management plan may be requested to provide additional information to Council. A site specific Bushfire hazard management plan is to be prepared in accordance with SC6.5.4 (Bushfire hazard management plan) All investigations, testing and design should be undertaken in accordance with industry practice and the provisions of relevant Australian Standards.

	<p>may also be necessary including Council, State government and other relevant agencies or individuals (e.g. Rural fire brigade).</p>	
Coastal hazard assessment report	<ul style="list-style-type: none"> Prepared by a Registered Professional Engineer Queensland or equivalent with experience in coastal or flood management. Consultation with other entities may also be necessary including Council, State government and other relevant agencies or individuals (e.g. Utility providers). 	<ul style="list-style-type: none"> A site specific Coastal hazard assessment report may be requested to provide additional information to Council. A site specific Coastal hazard assessment is to be carried out in accordance with: <ul style="list-style-type: none"> SC6.5.5 (Coastal hazard assessment report); Guideline: A risk assessment approach to development assessment in coastal hazard areas, DEHP, 2013; AS/NZS ISO 31000: 2009 Risk management—Principles and guidelines; Draft SPP Guideline, state interest—natural hazards, Guidance on coastal hazards; and current engineering best practice. All investigations, testing and design should be undertaken in accordance with industry practice and the provisions of relevant Australian Standards.
Flood hazard assessment report	<ul style="list-style-type: none"> Prepared by a Registered Professional Engineer Queensland or equivalent with experience in flood hazard assessment and flood management. Consultation with other entities may also be necessary including Council, State government and other relevant agencies or individuals (e.g. Utility providers). 	<ul style="list-style-type: none"> A site specific Flood hazard assessment report may be requested to provide additional information to Council. A site specific Flood hazard assessment is to be conducted in accordance with: <ul style="list-style-type: none"> SC6.5.6 (Flood hazard assessment report); and AS/NZS ISO 31000: 2009 Risk management – Principles and guidelines; All investigations, testing and design should be undertaken in accordance with industry practice and the provisions of relevant Australian Standards.
Landslide hazard (geotechnical) assessment report	<ul style="list-style-type: none"> Prepared by a Registered Professional Engineer Queensland or equivalent: <ul style="list-style-type: none"> who holds a degree in civil engineering or engineering geology with current membership of a recognised professional institution and whose primary business (with a minimum of 10 years of 	<ul style="list-style-type: none"> The site-specific Landslide hazard (geotechnical) assessment report may be requested to provide additional information to Council. A site specific Landslide hazard (geotechnical) assessment report is to be prepared in accordance with SC6.5.7 A Landslide risk assessment is to

	<p>experience) is in the field of geotechnical engineering or engineering geology; or</p> <p>b) who has local experience with landslides or demonstrable general experience with landslides and their mitigation and rehabilitation.</p> <ul style="list-style-type: none"> • Consultation with other entities may also be necessary including Council, State government and other relevant agencies or individuals. 	<p>be prepared in accordance with the Landslide Risk Management Guidelines (Australian Geomechanics Society 2007, c and d) in Australian Geomechanics, Volume 42, No. 1 March 2007, or any later guideline of the Australian Geomechanics Society as agreed by Council and is to be provided as part of the site specific Landslide hazard (Geotechnical) assessment report.</p> <ul style="list-style-type: none"> • All investigations, testing and design should be undertaken in accordance with industry practice and the provisions of relevant Australian Standards.

SC6.5.3 Bushfire hazard assessment report

SC6.5.3.1 Purpose of a Bushfire hazard assessment report

- (1) A Bushfire hazard assessment report is required to:
 - (a) quantify the bushfire hazard for a particular site;
 - (b) ensure appropriate methods are implemented to appropriately mitigate or avoid the risk of bushfire hazard; and
 - (c) provide information which supports the outcomes required by the Bushfire hazard overlay code.

SC6.5.3.2 Undertaking a Bushfire hazard assessment report

- (1) The method for assessing bushfire hazard involves quantitative and qualitative assessments. The quantitative element requires an assessment of three key characteristics of land that have been found to be the main determinants of the severity of bushfire hazard. These factors are vegetation communities, slope and aspect. The qualitative review should consider the known bushfire behaviour.
- (2) For most types of development, bushfire risk is assessed based on the vegetation existing on and in proximity to the site. However if reconfiguring a lot, the level of bushfire hazard should be assessed as if the vegetation in that area, including any areas designated for revegetation, has reached its mature state.
- (3) The steps to be followed and information provided when preparing a Bushfire hazard assessment report are outlined below.

Step 1: Assessment of vegetation communities

The type of vegetation community can determine the rate at which dry fuel accumulates and its susceptibility to bushfire. Some vegetation communities protect fuel from drying out in all but extreme bushfire seasons and can then be susceptible to very destructive bushfires.

Alternatively, vegetation communities may expose fuels to drying and therefore be frequently available for burning. Frequent bushfires can result in the development of bushfire-tolerant grassy woodlands or grasslands and less destructive bushfire behaviour.

Table SC 6.5.3.2.1 (Hazard scores and associated fire behaviours for vegetation communities) lists hazard scores for a range of vegetation community types for the purpose of assessing bushfire hazard.

Table SC 6.5.3.2.1 Hazard scores and associated fire behaviours for vegetation communities

Vegetation Communities	Fire behaviour	Hazard score
Wet sclerophyll forest, tall eucalypts (>30 m), with grass and mixed shrub understorey.	Infrequent fires under severe conditions, flame lengths may exceed 40 m, floating embers attack structures for 1 hour, radiant heat and direct flame are destructive for 30 minutes.	10
Paperbark heath and swamps, eucalypt forest with dry-shrub ladder fuels.	Fire intensity depends on fuel accumulation, but can be severe, with flame lengths to 20 m, spot fires frequent across firebreaks, radiant heat and direct flame for 15 minutes.	8
Grassy eucalypt and acacia forest, exotic pine plantations, cypress pine forests, wallum	Fire intensity may be severe with flame lengths to 20 m, but less attack from embers.	6

heath.		
Native grasslands (ungrazed), open woodlands, canefields.	Fast moving fires, available to fire annually to 4 years. Usually no ember attack, radiant heat for >10 m, duration <2 minutes.	5
Intact acacia forests, with light grass to leaf litter, disturbed rainforest.	Fires infrequent, usually burn only under severe conditions, relatively slow fires, usually little ember attack.	4
Orchards, farmlands, kikuyu pastures.	Fires very infrequent, slow moving, may be difficult to extinguish, frequent fire breaks.	2
Grazed grasslands, slashed grass.	Grazing reduces intensity and rate of spread of fire, duration <2 minutes.	2
Desert lands (sparse fuels), mowed grass.	Gaps in fuel, usually slow fire spread.	1
Intact rainforest, mangrove forest, intact riverine rainforest.	Virtually fireproof.	0

Note – Vegetation assessment should be based upon examination of the vegetation on and surrounding the subject site. Narrow strips of vegetation may be flammable; however, bushfires will not generally reach their full intensity where bushfire fronts are less than 100 metres wide. For this reason the following examples may be viewed as having the next lower hazard score (i.e. paperbark heath would have a score of 6 not 8, cypress pine forest 5 not 6):

- a) areas with a linear shape (e.g. roadside vegetation beside a cleared paddock); and
- b) units of vegetation less than 50 hectares in area and more than one kilometre from the nearest extensive vegetation.

Where the vegetation community is assessed as having a vegetation community hazard score of zero, no other factors need to be taken into account. No further action is required.

Step 2: Assessment of slope

Studies have shown that fires burn more quickly and with greater intensity up slopes, generally doubling every 10 degrees of slope. Also, the steeper the slope, the more difficult it is to construct ring roads, firebreaks and provide access for emergency crews. Trees situated downhill from structures will have their crowns close to the structures. This presents bushfire hazards particularly for exposed structures such as timber decks.

Table SC 6.5.3.2.2 (Hazard scores for slope) presents the hazard scores for different categories of slope.

Table SC 6.5.3.2.2 Hazard scores for slope

Slope	Hazard score
Gorges and mountains (>30%)	5
Steep hills (>20% to 30%)	4
Rolling hills (>10% to 20%)	3
Undulating (>5% to 10%)	2
Plain (0% to 5%)	1

Note – For site-specific assessment of bushfire hazard, if the site is downhill from the hazard, the slope effect may be taken as zero as the fire intensity will be less. However, burning heavy fuels may roll downhill and trees may fall down, so recommended setbacks from the hazard still need to be observed.

Step 3: Assessment of aspect

Aspect affects bushfire hazard due to the effects that exposure to direct sunlight has on different vegetation communities, including the drying rates of fuels. Aspect also correlates closely with exposure to low humidity winds that increase bushfire intensity. In extremely broken country where there is a range of aspects, the predominant aspect should be used.

As aspect has only a minor influence on flatter land, aspect is not considered to be significant on land with a slope less than 5%. Table SC 6.5.3.2.3 (Hazard score for aspect) lists the hazard score for different aspects.

Table SC 6.5.3.2.3 Hazard score for aspect

Aspect	Hazard score
North to north-west	3.5

North-west to west	3
West to south	2
North to east	1
East to south and all land under 5% slope	0

Step 4: Combining scores to identify the severity of bushfire hazard

The scores for the individual factors determined for vegetation communities, slope and aspect are added to give a total for each sub-unit as follows:

Total hazard score = vegetation community hazard score + slope hazard score + aspect hazard score.

The total hazard score determines the severity of bushfire hazard for each sub-unit as set out in Table SC 6.5.3.2.4 (Hazard score ranges to identify the severity of bushfire hazard).

Table SC 6.5.3.2.4 Hazard score ranges to identify the severity of bushfire hazard

Total hazard score	Severity of bushfire hazard
13 or greater	High
6 to 12.5	Medium
1 to 5.5	Low

Note – Buildings in High severity bushfire hazard areas should be constructed in accordance with the Level 1 requirements of AS 3959:1999 (Construction of Buildings in Bushfire-Prone Areas).

Step 5: Field verification

Preliminary bushfire hazard maps should be prepared based on the results of Step 4 above by aggregating all sub-units with similar levels of bushfire hazard severity into 'high' and 'medium' severity classifications. Field verification or 'ground truthing' of these preliminary results should then be undertaken. A number of sample areas should be evaluated to test the accuracy of the preliminary bushfire hazard findings.

Step 6: Qualitative assessment

Known bushfire behaviour complements the quantitative assessment and should be considered as part of the qualitative review.

Known bushfire behaviour is extremely difficult to use as a quantitative planning tool. This is because the absence of bushfire, even for an extended period of time, does not mean that an area will not burn and may lead to massive fuel accumulation with dangerous bushfire behaviour if it does ignite. Known bushfire behaviour may identify sites where combinations of slope and wind have led to severe bushfire behaviour in the past, and where extra precautions to protect assets might be required. The reliability of known bushfire behaviour may be difficult to assess and Queensland Fire and Rescue Service should be consulted if problems are indicated.

Step 7: Safety buffer

The final step in identifying bushfire hazard areas is to add a safety buffer, as land adjacent to a bushfire hazard area is vulnerable to bushfire attack from these areas.

Any land within 100m of an area identified as having a high bushfire severity classification should be included in the High bushfire hazard area and any land within 50m of an area identified as having a Medium bushfire severity classification should be included in the Medium bushfire hazard area. The safety buffers should be integrated into the preparation of maps that identify bushfire hazard areas.

Table SC 6.5.3.2.5 (Total hazard score and severity of bushfire hazard with safety buffers) shows the width of the safety buffers that apply to the various bushfire hazard severity classifications.

Table SC 6.5.3.2.5 Total hazard score and severity of bushfire hazard with safety buffers

Total hazard score	Severity of bushfire hazard	Extent of safety buffer
13 or greater	High	100m
6 to 12.5	Medium	50m
1 to 5.5	Low	Not applicable

SC6.5.4 Bushfire hazard management plan

SC6.5.4.1 Purpose of a Bushfire management plan

- (1) A Bushfire management plan is required to:
 - (a) identify the strategies a development is to implement for mitigating the impacts of bushfire on life, property and the environment, where a site has been identified as having a medium or high bushfire; and
 - (b) provide information and guidance to support the outcomes required by the Bushfire hazard overlay code.

SC6.5.4.2 Preparing a Bushfire hazard management plan

- (1) A Bushfire management plan identifies specific risk factors associated with the development, planning for the separation of at-risk elements and potential hazards, and providing access and treatments to facilitate an effective response to bushfire.
- (2) A Bushfire management plan is to be prepared having regard to the principles outlined in SC6.5.4.3 (Managing bushfire hazard risks) and is to include the following information:
 - (a) a site specific Bushfire hazard assessment report using the methodology set out in SC6.5.3 (Bushfire hazard assessment report) of this planning scheme policy;
 - (b) an assessment of other site-specific factors that are important in devising suitable bushfire mitigation strategies, such as likely direction of bushfire attack, environmental values that may limit mitigation options, location of evacuation routes and safety zones and identification of the risks on site and from nearby sites;
 - (c) an assessment of the specific risk factors associated with the development including:
 - (i) the intended future population size and characteristics;
 - (ii) the likely usage patterns on the site;
 - (iii) the estimated traffic generation;
 - (iv) the nature of activities to be conducted on the site;
 - (v) the storage or handling of hazardous chemicals;
 - (vi) the use of the site for emergency services or disaster response purposes;
 - (vii) particular warning or evacuation requirements; and
 - (viii) the total extent of clearing, revegetation and landscaping proposed for the site which is to be indicated on a site plan;
 - (d) mitigation measures identified for the development that address major factors in bushfire attack, including embers and burning debris, radiant heat, direct flame contact and wind. Smoke should also be addressed where it is relevant to mitigation measures for vulnerable uses, such as hospitals, aged-care facilities and facilities in which aged or disabled persons reside, or where resident populations are susceptible to respiratory disorders;
 - (e) a plan for mitigating the bushfire risk identified in the Bushfire hazard assessment report. The plan is to recommend specific mitigation actions for the development including:
 - (i) appropriate land uses;

- (ii) access, including road layout, accessways, driveways, evacuation routes, including an easement on site and on adjoining lands, access routes for two-wheel drive vehicles and fire-fighting appliances and evacuation requirements;
- (iii) lot layout and orientation;
- (iv) site layout including identification of proposed locations of buildings or building protection zones;
- (v) the need and construction standards for fire maintenance trails;
- (vi) access requirements and access routes for two-wheel drive vehicles and fire-fighting appliances;
- (vii) warning and evacuation procedures, plans and routes including capacity of public roads especially perimeter roads and traffic management treatments, and responsibility for their maintenance;
- (viii) fire-fighting requirements including infrastructure and water supply;
- (ix) landscaping, including details of new vegetation or landscape treatments to be used on site, particularly in the building protection zone;
- (x) operational, design, construction or management measures for responding to particular requirements of some land uses, such as air quality management and design standards of tanks and fittings;
- (xi) any other specific measures such as external sprinkler systems which are only as an adjunct to other passive controls, and alarms;
- (xii) ongoing purchaser or resident education and awareness programs; and
- (xiii) ongoing maintenance, management and response awareness programs, including tenure and community title arrangements. This should also include identification of specific responsibilities for actions required in the bushfire management plan for owners or occupiers of the development, the developer and Council.

SC6.5.4.3 Principles for managing bushfire hazard risks

Separation distances from sources of bushfire hazard

- (1) Topographical features of the site and design elements are used to maximise separation between sources of bushfire hazard and dwellings or buildings, and manage risk. These features include the following:
 - (a) roads, particularly perimeter roads and roads separating building locations on lots from vegetation with a hazard score higher than 4;
 - (b) fire maintenance trails where used;
 - (c) parkland and other areas maintained with reduced fuel loads such as mown grass, sports ovals, golf courses and car parks;
 - (d) water bodies and waterways;
 - (e) landscaped areas; and
 - (f) easements and other reserves such as future road reserves and maintained overland flow paths.

Design and construction of building protection zones

- (2) Building protection zones are to be established for the protection of buildings from bushfire:

- (a) the inner 10m of the building protection zone is to be maintained in a very low fuel state. This area is designed to prevent continuity of fuel, such as shrubs or build-up of leaf litter extending to the building through:
 - (i) paving, lawn or non-combustible mulch such as gravel;
 - (ii) tree retention only if there is a vertical and horizontal separation of 2m between plants to ensure the canopy is not continued.
- (3) The outer 10m of the building protection zone is to be maintained in a reduced fuel state. This area is designed to reduce bushfire intensity and shield buildings from radiant heat, and prevent flames transferring from ground fuels to the canopy. In the outer zone, trees may be retained or planted in small clumps, retaining vertical and horizontal separation between any other plants to ensure that canopy is not continuous.
- (4) In all areas of the building protection zone, trees should be a distance 1.5 times the mature canopy height away from buildings, and should not overhang buildings.

Design of roads and public access

- (5) When reconfiguring a lot involves the opening of a new road, a perimeter road is the preferred option to separate bushland from urban areas. The public road system in a bushfire-prone area is to provide alternative access or egress for firefighters and residents during a bushfire emergency if part of the road system is cut by fire. Roads should provide sufficient width to allow fire-fighting vehicle crews to work with fire-fighting equipment about the vehicle.
- (6) New lots do not back directly onto hazardous vegetation. The perimeter road allows for fire-fighting access. If a perimeter road is not used to isolate a cul-de-sac from the hazardous vegetation, alternative formal access and egress are provided (E.g. a fire maintenance trail). Using public roads is preferable to using easements.

Fire maintenance trails

- (7) Fire maintenance trails are only effective in the context of a strategic advantage and access for hazard-reduction operations. Fire maintenance trails present difficulties and costs associated with maintaining fire maintenance trails on private land. Proposals for fire maintenance trails will need to demonstrate clear benefits over the use of a perimeter road. A perimeter fire trail cannot be imposed on the adjoining lands.
- (8) Fire maintenance trails are primarily used as access for firefighters. They are also used for fire control lines and maintenance of buffers protecting development. In non-urban areas, they may surround isolated dwellings or groups of dwellings. In suburban subdivisions, they may function as a strategic control line around the hazard side of the development, if they are connected to the public road system at frequent intervals.
- (9) Fire maintenance trails are to be designed and located in accordance with a Bushfire hazard management plan prepared in accordance with this planning scheme policy. The bushfire management plan is to demonstrate that the fire maintenance trails:
 - (a) are located, designed and constructed to buffer development from bushfire hazard and allow access for fire-fighting vehicles to strategic areas of the site for firefighting;
 - (b) adjacent to Council parkland are to be on private land where no public road interface can be achieved;
 - (c) are unfenced and accessible at all times by fire-fighting vehicles;

- (d) connect through to a road network or network of other fire maintenance trails;
- (e) respond to site topography and bushfire characteristics of the site and surrounding area;
- (f) are located, designed and constructed to protect firefighter safety and provide for movement, manoeuvring and access to water supplies for firefighting.
- (g) are designed so that dead ends are avoided; however if a dead end exists, a turnaround of sufficient radius for a full lock by a Category 1 fire tanker should be constructed (radius³ 12m) and if there is insufficient space for such a turnaround due to the topography, provision should be made to allow a maximum three-point turn (radius³ 10m);
- (h) are designed and constructed to avoid adverse environmental impacts, including soil erosion, impacts on natural hydrological flows, or other land degradation;
- (i) link to existing fire maintenance trails or roads at each end and at maximum intervals of 200m, having regard to site topography, firefighter safety and the need to regularly access water supplies;
- (j) do not alter natural hydrological flows or expose acid sulfate soils; and
- (k) primary trails are maintained to provide safe four-wheel drive access by fire-fighting vehicles.

Landscaping

- (10) The preparation of a landscaping plan is to be guided by best practice ensuring the design and species selection in the landscape plan:
 - (a) prevents flame impingement on the dwelling;
 - (b) provides space and access for property protection;
 - (c) reduce fire spread;
 - (d) deflects and filter embers;
 - (e) provides shelter from radiant heat;
 - (f) reduces wind speed;
 - (g) meets the spacing requirements in the bushfire protection zone;
 - (h) uses site features including topography and driveways to manage hazards;
 - (i) maximises separation distances between structures and sources of bushfire hazard; and
 - (j) identifies the use of appropriate materials and species in landscaping to manage fuel loads.
- (11) All vegetative material can burn under the influence of bushfire. Careful attention must be paid to species selection, their location relative to their flammability, avoidance of continuity of vegetation horizontally and vertically, and ongoing maintenance to readily remove flammable fuels such as leaf litter, twigs and debris.

Selection of plant species is not to be relied upon as a primary measure to reduce bushfire risk.

SC6.5.5 Coastal hazard assessment report

SC6.5.5.1 Purpose of a Coastal hazard assessment report

- (1) A Coastal hazard assessment report is required to:
 - (a) demonstrate that a development will not increase risk to people and property from coastal hazards impact or create an adverse coastal hazard impact including an impact on the ongoing operation of development in coastal hazard areas; and
 - (b) provide information and guidance to support the outcomes required by the Coastal environment overlay code.

SC6.5.5.2 Desired outcomes for a Coastal hazard assessment report

- (1) The following minimum outcomes have been identified to guide the consideration of risk to development from a coastal hazard. These outcomes in Table SC 6.5.5.2.1 (Outcomes for a coastal hazard assessment report) are not necessarily exhaustive having regard to a site or development.

Table SC 6.5.5.2.1 Outcomes for a coastal hazard assessment report

Outcome 1	Development in an area subject to a coastal hazard protects safety and amenity.
Outcome 2	Buildings and structures are designed to withstand coastal hazards and minimise cost and disruption to the community associated with responding to coastal hazard impacts.
Outcome 3	An acceptable standard of amenity for future users of the premises is achieved.
Outcome 4	Difficult to evacuate uses and vulnerable uses are to be located outside of Medium storm-tide sub-category areas and the High storm-tide sub-category coastal hazard areas.
Outcome 5	Development relying on an evacuation route or supporting infrastructure located elsewhere demonstrates that those elements in themselves are not susceptible to a coastal hazard.
Outcome 6	Any action taken to mitigate the impacts of coastal hazards does not impact adversely on an adjacent premise or the ability of others to implement their future adapt, defend or retreat actions.
Outcome 7	Development in an area subject to coastal hazards protects biodiversity, the integrity of environmental networks and coastal resources.

SC6.5.5.3 Undertaking a Coastal hazard assessment report

- (1) The nature and severity of flood actions is to be established for the site and is to inform the appropriate site and use mitigation measures that are development specific.
- (2) The coastal hazard assessment is to address the sources of coastal hazards, specifically including both the impacts of storm tide and longer term salt-water inundation due to tidal flooding.
- (3) The flood actions to be considered in the coastal hazard assessment include the following:
 - (a) the extent of inundation;
 - (b) flow velocities and depths of inundation through the assessment area;

- (c) hydrostatic and hydrodynamic forces on a structure and a building;
- (d) debris impacts;
- (e) proximity to coastal waters and associated wave actions;
- (f) erosion and associated scour;
- (g) distance to land unaffected by flooding; and
- (h) duration of flooding.

SC6.5.5.4 Preparation of a Coastal hazard assessment report

- (1) The Coastal hazard assessment report is to:
 - (a) include a Coastal risk assessment, as detailed in Table SC 6.5.2.1 (Requirements of natural hazard documentation) of this planning scheme policy;
 - (b) describe the impacts of coastal hazards on the site;
 - (c) describe all proposed mitigation measures for the site. These mitigation measures are to:
 - (i) address the full extent of exposure to flood action;
 - (ii) address the location, design, siting, construction, and operational procedures for the development;
 - (iii) determine the risk of scour or erosion for the particular coastal hazard area and mitigation methods;
 - (iv) be specific to the full extent, nature and characteristics of the intended use, including affected populations;
 - (v) be contained wholly on the site; and
 - (vi) include existing or committed defence measures in developing a site-specific response.
 - (d) address the outcomes for a Coastal hazard assessment report as detailed in Table SC 6.5.5.2 (Desired outcomes for a Coastal hazard assessment report) detailed in this planning scheme policy;
 - (e) describe any residual risks likely to be experienced on site or created by the development external to the site.

SC6.5.6 Flood hazard assessment report

SC6.5.6.1 Purpose of a Flood hazard assessment report

- (1) A Flood hazard assessment report is required to:
 - (a) quantify the flood hazard for a particular site;
 - (b) ensure appropriate methods are implemented to appropriately mitigate or avoid the risk of flood hazard; and
 - (c) provide information and guidance to support the outcomes required by the Flood hazard overlay code and the Coastal environment overlay code.

SC6.5.6.2 Preparing a Flood hazard assessment report

- (1) The Flood hazard assessment report is to include the following key elements:
 - (a) assessment of the flood risk and implications up to and in excess of the defined flood event; the flood risk does not stop at the defined flood event so the suitability of a land use must consider the implications of larger floods, particularly in regard to the risk to people. The following should be identified:
 - (i) the potential impacts of flood hazard on the development;
 - (ii) the potential impacts of the development on flood hazard;
 - (iii) the location and height of buildings, particularly habitable floor areas;
 - (iv) the location and design of plant and equipment, including electrical fittings; and
 - (v) impact of increases in rainfall intensity at 2050 and 2100 in regard to safety and property damage;
 - (vi) in the case of overland flow flooding a severe storm impact assessment being provided in accordance with Queensland Urban Drainage Manual;
 - (vii) as relevant, include accurate hydrological and hydraulic modelling for the waterway network and assessment of existing flooding and flood levels of major water systems, including modelling of the 50%, 10%, 1%, 0.5% and 0.2% AEP flood events and the Probable Maximum Flood (PMF);
 - (b) identification of the stakeholders exposed to or affected by the risk of flooding and their compatibility to the risk and how flood risk to people is managed. specifically identifying:
 - (i) number of people likely to be at risk and who may need to be evacuated;
 - (ii) special care uses (the publication Evacuation Planning by Emergency Management Australia (Commonwealth Government 2005) provides a list of special needs groups);
 - (c) identification of public and private premises, social systems and environmental elements at risk of flooding, including consideration of extreme flood events;
 - (d) identification of all critical electrical services, hazardous storages and other high risk elements;
 - (e) evacuation routes – identify applicable routes, if relied upon, and flood immunity of those routes, and an assessment of the safety of people moving to those routes;

- (f) isolation – potential to have evacuation route cut off early in the flood;
 - (g) burden placed on emergency services – while important to allow safe access for emergency services, they cannot be relied on as a solution to egress difficulties and evacuation;
 - (h) special care requirements at evacuation destination – uses focused on vulnerable people such as children or elderly and their special requirements for care and the ability of evacuation centres to provide that care;
 - (i) length of flood recovery and social and economic impacts; that is, the likelihood and consequences of flooding. This evaluation requires a quantitative analysis that uses numerical values, rather than the descriptive scales used in qualitative and semi-quantitative analysis for both consequences and likelihood. The quality of the analysis depends on the accuracy and completeness of the numerical values used
 - (j) flood-resilient design – this may include both using flood-compatible materials and building design aspects such as locating the least flood-tolerant uses at the highest development levels;
 - (k) definition of flood hazard management strategies is to include:
 - (i) a description and evaluation as to the impact of the proposed mitigation strategies on the existing and likely future use of land and buildings in proximity to the proposed development;
 - (ii) the proposed method of perpetuating the restricted use and required mitigation measures through appropriate forms of legal documentation, notation on titles and methods for conveying the risk management data to future owners and leaseholders; and
 - (iii) the procedure to conduct emergency flood management, evacuation and rescue operations including flood emergency management plans.
- (2) Development which proposes a lowering of flood immunity standards through a risk assessment (usually an industrial use) is to ensure the building materials are constructed of flood-compatible materials.

SC6.5.7 Landslide hazard (geotechnical) assessment report

SC6.5.7.1 Purpose of a Landslide hazard (geotechnical) assessment report

- (1) The Landslide hazard (geotechnical) assessment report is required to:
 - (a) quantify the landslide hazard for a particular site;
 - (b) ensure appropriate methods are implemented to appropriately mitigate or avoid the risk of landslide hazard; and
 - (c) provide information and guidance to support the outcomes required by the Landslide hazard overlay code.

SC6.5.7.2 Risk assessment criteria

- (1) For the purposes of completing the risk assessment, tolerable risk criteria apply and are specified by the Australian Geomechanics Society in Table 1 (AGS Suggested Tolerable loss of life individual risk) in the Practice Note Guidelines for Landslide Risk Management 2007, except where societal risk applies as noted below.
- (2) 'Acceptable risk' criteria as described in Australian Geomechanics Society 2007 Practice note guidelines for landslide risk management 2007 are one order of magnitude lower than 'tolerable risk' as specified in Table 1 (AGS Suggested Tolerable loss of life individual risk) and are to apply to:
 - (a) essential community infrastructure;
 - (b) sensitive uses;
 - (c) assembly uses;
 - (d) difficult to evacuate uses; and
 - (e) hazardous materials.

SC6.5.7.3 Preparing a Landslide hazard (geotechnical) assessment report

- (1) The site-specific Landslide hazard (geotechnical) assessment report is to include a landslide risk assessment, as detailed in Table SC 6.5.2.1 (Requirements of Natural hazard documentation) of this planning scheme policy and demonstrate that development on land susceptible to landslide has had appropriate regard to the geological elements including landslide risk on the site.
- (2) The site specific Landslide hazard (geotechnical) assessment report is to:
 - (a) include recommendations and a conclusion that are supported by the data and all stated assumptions contained in the assessment;
 - (b) be capable of being verified by a peer review;
 - (c) state whether the site is suitable for the development in compliance with the risk assessment criteria in SC6.5.7.2 (Risk assessment criteria) for the loss of life and for property loss; and
 - (d) identify the risk mitigation measures for the site.
- (3) As a guide the following report format and contents description indicates the depth of detail required:

- (a) an introduction including details of the development, such as site location and description including the real property description and the proposed development, reconfiguring a lot or construction details;
- (b) a description of existing conditions, including existing research material:
 - (i) aerial photographs;
 - (ii) geological maps;
 - (iii) geological reports;
 - (iv) site classification;
 - (v) geology (local and regional), including:
 - (A) surface and sub-surface materials; and
 - (B) geomorphology (slopes, ground contours, natural features, terrain analysis, landslide features);
 - (vi) site history, including the location size and type of previous landslips on or affecting the site and hazards outside the site but likely to affect it, such as landslides or rockfalls upslope of the site;
 - (vii) groundwater, including:
 - (A) watertable; and
 - (B) springs and seepage areas in the local area of interest;
 - (viii) surface drainage patterns;
 - (ix) vegetation cover on and around the site; and
 - (x) buildings, other structures, earthworks;
- (c) an assessment of land stability/suitability, including:
 - (i) proposed development components;
 - (ii) a landslide risk assessment for the site indicating the likelihood and consequences of landslides on or near the site affecting the development and the calculated risk to life and property having regard to SC6.5.7.2 (Risk assessment criteria); and
 - (iii) potential geotechnical effects of the development on land stability;
- (d) an assessment of development impacts, including:
 - (i) site layout;
 - (ii) roadworks, driveways and other pavements;
 - (iii) earthworks (excavation, materials usage);
 - (iv) foundations;
 - (v) surface drainage;
 - (vi) wastewater (treatment and disposal);
 - (vii) detailed existing stability of the site and of geotechnical constraints on buildings or other development work on the site as well as on land above and below the site;
 - (viii) overall effect of development on the stability of the site as well as on land above and below the site; and
 - (ix) overall effect of any site sewage disposal system or rainwater run-off system on slope stability;
- (e) recommendations on appropriate measures required to avoid or minimise risks of instability or other adverse environmental effects, on the site as well as land above or below the site, including:
 - (i) preferred locations for buildings, other structures and driveways;
 - (ii) foundation requirements;
 - (iii) pavement types and design;
 - (iv) construction methods to avoid problem areas;
 - (v) preferred excavation, retention and stabilisation techniques and the suitability of excavated materials for use in on-site earthworks;
 - (vi) surface and sub-surface drainage requirements;
 - (vii) preferred methods of wastewater disposal;
 - (viii) vegetation protection and revegetation requirements; and
 - (ix) design life adopted;

- 
- (f) a summary and conclusions on the overall suitability of the land for the proposed development; and
 - (g) appendices for field and laboratory test results, including the location and level of field investigations such as boreholes and trench pits.

SC6.6 Third party advice or comment planning scheme policy

SC6.6.1 Introduction

SC6.6.1.1 Relationship to the Planning Scheme

- (1) This planning scheme policy applies to any development application which has been 'properly made' with Council for assessment against the Planning Scheme. Council may require further expert advice or want to seek comments from a special interest person or group on the development application.

SC6.6.1.2 Purpose

- (1) This planning scheme policy:
 - (a) allows Local government to seek advice or comment, where appropriate, about an application in any circumstances the Local government determines, including, in the Local government's opinion if:
 - (i) the development may conflict with an overlay;
 - (ii) specialised technical advice is required to assess the development; or
 - (iii) the development may affect premises being of special interest to a person.
 - (b) describes the methods which may be used by Council to obtain third party advice or comment on a particular development application prior to the commencement of the Decision Stage.

SC6.6.2 Third party consultation

- (1) The purpose of Consultation is to seek third party advice or comment on any development application prior to the commencement of the Decision Stage. The advice may be sought from any individual, stakeholder or interest group.
- (2) The advice or comment may be sought in any appropriate way, including:
 - (a) public notification in the newspaper; or
 - (b) placing a notice on the premises; or
 - (c) placing a notice on public land; or
 - (d) personal notification or contact; or
 - (e) public meetings; or
 - (f) meeting with a person having a special interest.
- (3) When seeking third party advice or comment, Council will provide appropriate information on the proposal including:
 - (a) a description of the proposal;

- 
- (b) details of where the development application can be inspected;
 - (c) provide a copy of relevant information;
 - (d) details of where comments may be lodged; and
 - (e) the last day upon which Council will accept advice or comment.
- (4) The providing of third party advice or comment for a development application under this planning scheme policy does not provide the consulted party with any Appeal Rights as described by The Act.

SC6.7 Growth management planning scheme policy

SC6.7.1 Introduction

SC6.7.1.1 Relationship to the Planning Scheme

- (1) This planning scheme policy provides:
 - (a) information the Council may request for a development application; and
 - (b) guidance or advice about satisfying an assessment benchmarks which identifies this planning scheme policy as providing that guidance or advice.

SC6.7.1.2 Purpose

- (1) The purpose of this planning scheme policy is to provide information, guidance and advice for satisfying the assessment benchmarks for the preparation of a site specific:
 - (a) Development needs assessment report;
 - (b) Economic impact assessment report;
 - (c) Structure plan; and
 - (d) Traffic impact assessment report.

SC6.7.2 Requirements of growth management documentation

- (1) Growth management documentation is to be prepared in a clear and concise manner, consistent with the elements identified in Table SC 6.7.2.1 (Requirements of growth management documentation) below, as well as any specific requirements identified in the relevant sub-sections of this report.

Table SC 6.7.2.1 Requirements of growth management documentation

Documentation	Preparation	Report requirements
Development needs assessment report	<ul style="list-style-type: none"> Prepared by a suitably qualified professional with appropriate technical expertise in economics and economic assessments. Consultation with other entities may also be necessary including Council, State government and other relevant agencies or individuals (e.g. business owners). 	<ul style="list-style-type: none"> A Development needs assessment report may be requested to provide additional information to Council. A Development needs assessment report is to be prepared in accordance with SC6.7.3 (Development needs assessment report)
Economic impact assessment report	<ul style="list-style-type: none"> Prepared by a suitably qualified professional with appropriate technical expertise in economics and economic assessments. Consultation with other entities may also be necessary including Council, State government and other relevant agencies or individuals (e.g. business owners). 	<ul style="list-style-type: none"> An Economic impact assessment report may be requested to provide additional information to Council. An Economic impact assessment report is to be prepared in accordance with SC6.7.4 (Economic impact assessment report)
Structure plan	<ul style="list-style-type: none"> Prepared by a suitably qualified professional with appropriate technical expertise in planning and design and the preparation of Structure plans. SC6.7.3 Development needs assessment report

SC6.7.3.1 Purpose of a Development needs assessment report

- (1) A Development needs assessment report is required to:
 - (a) justify the need for the development given the current demand and supply of existing land and uses; and
 - (b) ensure the development is economically feasible, with appropriate methods implemented to mitigate or avoid any negative impacts that may result from the development.

SC6.7.3.2 Preparation of a Development needs assessment report

- (1) A Development needs assessment report is to include at a minimum:
 - (a) a supply analysis of land zoned for the same or similar purpose as that proposed by the development within the broader locality, having regard for:
 - (i) existing supply of developed and undeveloped land zoned for the same or similar purpose as that proposed;
 - (ii) current competition for undeveloped land zoned for the same or similar purpose as that proposed;
 - (iii) the consistency of the location with regard to the function and accessibility of the development, including infrastructure provision; and
 - (iv) whether, if not satisfactorily located, it would jeopardise the provision of facilities in a location better placed to provide a higher level of choice or degree of convenience and accessibility;
 - (b) a demand analysis of land zoned for the same or similar purpose as that proposed by the development within the broader locality, having regard for:
 - (v) the existing population currently serviced by existing development and the socio-economic characteristic of this population;
 - (vi) the population anticipated to be serviced by the proposal over a short, medium and long term planning horizon and the socio-economic characteristic of this population;
 - (vii) the existing and anticipated demand for floor space/dwellings over a short, medium and long term planning horizon; and
 - (viii) establishment as to whether the proposed development would result in an excess of developed land (for that purpose) locally and within the broader context of the area; and whether the proposed development may be premature or inappropriate in this regard;
 - (c) the economic feasibility of the proposed development, having regard for:
 - (ix) the identified existing supply and demand (and future anticipated demand);
 - (x) the capacity/capability/maturity of the market to achieve what is required at a feasible rate and scale;
 - (xi) the development size;
 - (xii) nature of the services proposed to be included within it;
 - (xiii) configuration of the general road network which is likely to provide access to the development;
 - (xiv) location of any physical or psychological barriers to movement;
 - (xv) location of complimentary, competing/similar development;
 - (xvi) expected direct and indirect development employment during construction and operations;
 - (xvii) changing trends in lifestyle choices and social behaviour relating to community needs which may affect the proposal; and

- 
- (xviii) any other benefits or detriments to the local area or the community in general; and
 - (d) outline and detail the measures that will be implemented to avoid or mitigate significant impacts identified in the assessment.

SC6.7.4 Economic impact assessment report

SC6.7.4.1 Purpose of an Economic impact assessment report

- (1) An Economic impact assessment report is required to:
 - (a) quantify the economic effects a development may have on surrounding uses; and
 - (b) ensure appropriate methods are implemented to appropriately mitigate or avoid any negative impacts that may be result from the development.

SC6.7.4.2 Preparation of an Economic impact assessment report

- (1) An Economic impact assessment report is to include at a minimum:
 - (a) the extent of existing floor space and approved new floor space in the area likely to be serviced by the proposed facility and in surrounding areas which could be affected by it;
 - (b) the likely trade area of the proposed facility having regard to the developments:
 - (i) size;
 - (ii) nature of the services proposed to be included within it;
 - (iii) configuration of the general road network which is likely to provide access to the facility;
 - (iv) location of any physical or psychological barriers to movement; and
 - (v) location of competing facilities;
 - (c) the nature and adequacy of existing facilities and approved new facilities in the trade area referred to above and the level of convenience provided by such facilities;
 - (d) the population, existing and projected, for the likely future trade area and the socio-economic characteristics of that population;
 - (e) the demand, or likely future demand, for commercial floor space in the area referred to above;
 - (f) whether the establishment of the proposed facilities would result in:
 - (i) an excess of commercial floor space of the type proposed in the area; or
 - (ii) would result in an excess of commercial floor space generally; and
 - (iii) whether the proposal may be premature or inappropriate in this regard;
 - (g) the likely impact of the proposed development together with the additional cumulative effect of any approved new commercial developments within the same area on existing businesses, with such impacts clearly articulated together with the means by which they can be ameliorated;
 - (h) whether the proposed location:
 - (i) is consistent with the function of the facility;
 - (ii) maximises accessibility within its potential trade area; and
 - (iii) maximises the use of public transport and pedestrian and cycle accessibility;

- 
- (i) whether, if not satisfactorily located, it would jeopardise the provision of facilities in a location better placed to provide a higher level of choice or degree of convenience and accessibility;
 - (j) the expected direct and indirect development employment during construction and operations;
 - (k) changing trends in shopping and other behaviour relating to community needs which may affect the proposal;
 - (l) the environment effects and urban design implications of the proposal;
 - (m) any other benefits or detriments to the local area or the community in general, including the expected direct and indirect development employment during construction and operations; and
 - (n) outline and detail the measures that will be implemented to avoid or mitigate significant impacts identified in the assessment.

SC6.7.5 Structure plan

SC6.7.5.1 Purpose of a Structure plan

- (1) A Structure plan is required to:
 - (a) identify the major elements of the locality surrounding a development that may impact on the planning and design of the site, ensuring the integration of the development and the continuation of corridors, networks and linkages with and beyond the development site;
 - (b) identify how constraints (within the various overlays) or competing interests have been addressed and reconciled; and
 - (c) reconcile how the site will fit into the future development of the surrounding area without compromising the effective and efficient development of those lands.

SC6.7.5.2 Preparation of a Structure plan

- (1) The extent of the information contained in a Structure plan will depend upon the issues and their resolution, the context of the development in the surrounding area and the number of overlays that impact on the area and the site. The more constrained the site, the greater the level of detail required to justify the development.
- (2) The major components of the development are to be designed with consideration of this broader context. The Structure plan is to be clear about how the proposed development will integrate with the surrounding community and with the existing parks, service and infrastructure networks and the movement system (road network, public transport facilities and pedestrian and cyclist paths) in the area, including as required by the Transport and parking code.
- (3) The scope of a Structure plan is tailored to match the scale and likely impact of the proposed development and depends on the nature and extent of the:
 - (a) issues associated with the site and the immediate locality surrounding the site, such as land uses, availability of infrastructure, topographical features, significant vegetation, movement systems, natural features, historical features and existing character; and
 - (b) proposal, its uses, the sequence of development and external impacts such as stormwater quality and quantity management, traffic generation, public transport availability, infrastructure capacity, wildlife corridor linkages and social impacts.
- (4) In addition to the general requirements of a Structure plan, an industrial structure plan is to also identify:
 - (a) the most appropriate location for different types of industries to minimise land use incompatibilities and conflicts;
 - (b) the integration of the site with surrounding development including any necessary buffering; and
 - (c) that any reconfiguring a lot is appropriate for the intended industry for the locality.

- (5) The steps to be followed and information provided when preparing a Structure plan are outlined below.

Step 1: Site and context assessment

Prior to preparing a Structure plan, an assessment of the site and its context is undertaken and a site description of land prepared, supported by a map containing the following features as a minimum the:

- a) development layout;
- b) topography – contours and levels;
- c) existing street network and intersections and future connections (identifying minor road connections required to facilitate efficient movement and connectivity of the local road network), and their treatments and public transport routes and their stops;
- d) existing residences and structures (such as pool, tennis court or shed), land uses and approvals on surrounding sites;
- e) location of nearby schools, shopping centres, employment generators and other community facilities;
- f) location of surrounding existing and proposed park network and pedestrian and cyclist paths; and
- g) existing infrastructure.

Step 2: Identification of constraints

Land in the Emerging community zone or Industry investigation zone is generally suitable for development. However some land has values or constraints that will influence the location, form and density of development. As a minimum, values and constraints as identified in any overlays are mapped and considered in the design of the overall development.

Step 3: Analysis of the site characteristics and constraints and allocation of land uses

Once the site characteristics and constraints have been identified, they are addressed by the Structure plan as recommended by the relevant codes and local plans where applicable. In some cases it may be possible to develop all or part of constrained sites carefully and sensitively. Alternative approaches may be required to accommodate development, for example lower development yields or sensitive residential design to ensure the retention of land with environmental or scenic constraint or other values. For other sites, development will not be possible. In many cases, a local plan or provisions within codes will articulate whether development is possible, and if so, how it should occur.

The application must demonstrate integration, namely:

- a) compatibility of surrounding uses (existing and proposed) with the proposed use/s;
- b) that consideration has been given to the potential for the development and coordinated and integrated development of adjoining Emerging community zone or Industry investigation zone; and
- c) that the development does not prejudice the development of an adjoining premises by shifting unreasonable costs of infrastructure onto adjoining premises, such as parks, stormwater management facilities, roads and bridges.

On a smaller site, where it is not possible to include the full range of land uses that support a sustainable community, it is particularly important to demonstrate that the parks are well

planned (either on the site, or already approved on adjoining land) and an integrated road network can be achieved.

If a site is in the Emerging community zone, a Structure plan is to demonstrate that the allocation of land uses ensures the following:

- a) land is used primarily for residential purposes;
- b) residential communities are well serviced and enjoy high amenity by providing for a range of complementary business and employment opportunities and community uses and facilities as early as possible. These may include centres, education facilities, parks, health care facilities, youth clubs and emergency services;
- c) residential development has good access to public transport, local parks, education facilities, shops and community facilities. As such, these uses must be accommodated in locations that maximise the service they provide to the community and minimise any associated impacts. These uses must be centrally located or highly accessible to their respective catchments and wherever possible to be co-located in or near centres. Uses that are likely to draw significant levels of non-local traffic into residential streets will not be approved unless there is a significant offsetting of community benefit and traffic impacts can be minimised;
- d) residential development provides appropriate housing choices for all people and allows residents the opportunity to remain within their neighbourhoods during all stages of their life, with a range of housing choices provided throughout the area. However, houses at low density should predominate; and
- e) development does not impinge on the legitimate operation of existing uses and is suitably buffered from incompatible existing uses on the site or on adjacent land.

Industrial development may occur in the Industry investigation zone subject to the identification of environmental performance of the development and the mechanism for the provision of infrastructure in the development.

When allocating industry investigation zoned land for future industrial development, the nature of the industry and the intended industry zone is to align with the separation distances to sensitive zones as detailed in the Reconfiguring a lot code and the assessment benchmarks of the applicable codes.

If a site in the Centre zone or Mixed use zone, a Structure plan is to detail the following:

- a) the mixture and proportion of uses and how these will contribute to economic vitality and the physical environment;
- b) key site planning and design elements of the development and how these contribute to the overall centre or corridor structure, movement and circulation network and built form character;
- c) building, open space and landscape siting and how these promote and support:
 - i) economic activity and community service delivery;
 - ii) public transport interchange;
 - iii) accessibility and connectivity;
 - iv) safety and security;
 - v) community use and meeting;
 - vi) higher density residential living;
 - vii) the character and identity of the centre or mixed use area; and
 - viii) design for climatic comfort, energy efficiency and subtropical outdoor living;
- d) the streetscape and public space interface including public and publicly accessible spaces and linkages, active frontages or significant corner treatments;

- e) development interfaces to the surrounding neighbourhood, adjoining sites and to other buildings or uses within the site to mitigate and manage amenity impacts;
- f) air or noise impacts on the site and how these will be addressed through use, site planning or building design; and
- g) the existing reduced levels and proposed finished levels for all elements.

Step 4: Document the Structure plan

The structure plan design, including land use allocation, movement network design, and open space and park network provision, is to actively promote achievement of the applicable zone and the intent of any relevant local plan.

The structure plan design is to also enable the development to comply with the requirements of all other relevant codes unless specified otherwise by a local plan.

The structure plan is to contain the degree of detail appropriate to the particular development and its circumstance and at a minimum map and report on the following:

- a) the approximate lot or dwelling yield for each part of the site (density);
- b) the location of each proposed land use, including where applicable, the extent of facilities proposed such as community facilities, centres, employment and education facilities;
- c) how and where broad physical infrastructure is to be provided such as water, sewerage and stormwater;
- d) the general location and size of parks including corridor linkages and networks and identify the park zone precinct and type that aligns with the intended future function of the site;
- e) the existing and proposed pedestrian and cyclist paths;
- f) the existing and proposed road network, including level in the hierarchy;
- g) the existing and proposed public transport routes and stops; and
- h) the proposed staging of development.

When in map form, the information is to be provided at a maximum scale of 1:2,000 and includes a bar scale and north point.

Step 5: Level of consultation required for a structure plan

The preparation of a structure plan will entail the level of consultation required by the *Planning Act 2016* for impact assessable development. On smaller sites, the consultation required by the *Planning Act 2016* would generally suffice.

However, where the site or the proposal entails complex issues, or involves a large site with multiple precincts and land uses, and/or the structure plan is inadequately detailed to facilitate informed public submissions, Council may require additional material and community consultation as part of a formal Information Request.

SC6.7.6 Traffic impact assessment report

SC6.7.6.1 Purpose of a Traffic impact assessment report

- (1) A Traffic impact assessment report is required to:
 - (a) quantify the effects a development may have on traffic movement and safety on the site and adjacent transport network (streets and intersections) within the sphere of impact of the development; and
 - (b) ensure appropriate methods are implemented to appropriately mitigate or avoid any negative impacts that may be result from the development.

SC6.7.6.2 Preparation of a Traffic impact assessment report

- (1) A Traffic impact assessment report includes at a minimum the following information for the site and the adjacent transport network (streets and intersections) within the sphere of impact of the development:
 - (a) an assessment of present traffic operations and safety without the development;
 - (b) an assessment of traffic operations and safety for the following scenarios:
 - (i) at completion of the development, and if the development is staged, also at each significant stage prior, including a comparison between current traffic arrangements and proposed traffic arrangements and an outline of the works proposed to offset anticipated traffic impacts;
 - (ii) without the development on a 10 year planning horizon from completion of the development; and
 - (iii) with the proposed and any additional upgrading works proposed in conjunction with the development on a 10 year planning horizon from completion of the project;
Note—Council should be consulted regarding the expected traffic growth rates for assessing the future scenarios.
 - (c) a statement describing how the development will provide for safe and convenient movement to, from and within the site;
 - (d) a statement describing how the development will facilitate walking, cycling and greater use of public transport in preference to using private motor vehicles for trips to and from the development;
 - (e) a statement describing how public transport services and infrastructure will be improved as a result of the development, particularly where relating to indented bus bays and bus shelters;
 - (f) a statement describing the measures used to ensure maximum accessibility from the site to public transport, including where future public transport services are envisaged;
 - (g) a statement describing the measures used to ensure that through traffic is not introduced into local street systems;
 - (h) an assessment of existing parking supply and demand in the vicinity of the development for both on- and off-street parking, and an assessment of the impact of the development on this parking supply and demand;

- (i) a statement describing the appropriate provision for parking in the development based on land use and the potential for trip-making by public transport, or by walking and cycling;
- (j) a statement describing the appropriate provision for on-site bicycle parking facilities;
- (k) a statement describing whether the proposed means of ingress to or egress from the development are adequate and located appropriately according to the road hierarchy;
- (l) an assessment of the provisions made for the loading, unloading, manoeuvring and parking of service vehicles within the development and on the subject site;
- (m) an assessment of refuse storage area/s and demonstration of safe vehicle access for the removal of refuse;
- (n) an assessment of the proposed routes within the development used by service vehicles associated with the development, and the impacts of heavy vehicle movements on these routes;
- (o) an assessment of the potential for integration of access with adjacent development through sharing of common ingress and egress arrangements;
- (p) an assessment of the impacts on public transport, traffic operations and parking as a result of any temporary works required during construction;
- (q) a record of any comments made by the Department of Transport and Main Roads or any other State planning authority that comply with the rights and powers of these agencies;
- (r) an assessment of the existing and likely future amenity of the surrounding area, and of the potential impacts of the development on that amenity;
- (s) a statement describing all of the assumptions made in the preparation of the report and the design parameters adopted in the technical analysis;
- (t) a statement describing how traffic generation and parking proposed rates (based on gross floor area) are supported by reference to publicly available documents or attaching actual traffic survey data for a similar activity;
- (u) a statement describing how the layout of the development provides for the safe movement of pedestrians and cyclists within the development and to/from the core of the development and the frontage streets, taking into account the location of public transport and pedestrian facilities;
- (v) an assessment of the operation of any security boom gate or card reader and its impact on vehicle queuing on the frontage roads; and
- (w) an assessment of traffic signals operation based on existing signal phasing, including impact on adjacent intersections.

SC6.8 Whitsunday Regional Council development manual planning scheme policy

SC6.8.1 Introduction

SC6.8.1.1 Relationship to the Planning Scheme

- (1) The planning scheme policy applies to development requiring submission of approval applications, including design details and construction procedures.
- (2) It is the intention of the WRC Development manual to set out procedures and requirements that are consistent with the *Planning Act* 2016 and its supporting legislation, and represent 'best practice' in accordance with accepted current state and national standards for design and construction.
- (3) The WRC Development manual sets out procedures involved in applying for an Operational Works Permit for Works that will ultimately be in the ownership and maintenance responsibility of Council or other services authorities or works which are subject to approval by Council.

SC6.8.1.2 Purpose

- (1) This planning scheme policy provides:
 - (a) a comprehensive, practical and authoritative guide through the development approval process from inception to completion for Developer's, Consultants, Contractors and Council Officers; and
 - (b) a consistent set of Engineering standards for implementation across the Whitsunday Region.

SC6.8.2 Whitsunday Regional Council (WRC) development manual

- (1) For further detail regarding procedure or specifications, refer to the WRC development manual document.
